GENERAL CONSIDERATIONS

If you are going to use electrical appliances in another country, you need to know what type of electrical voltage is used in the country you're traveling to and the type(s) of plugs and outlets used there. To learn this, consult the [Table of Electrical Systems used worldwide](#).

If the voltage is the same, or if you're using a universal power supply (see below), all you may need is a [plug adapter](#). [Converters](#) are available to change line voltage from one amount to another. However, there are different types of converters for different types of appliances. Small electronics, razors and non-heating appliances can operate with a 50-watt converter. Heating appliances such as hair dryers, irons, coffee makers and other high-power electrical appliances need a 1600-watt converter. You can also purchase combination converters for both types. Check the label on your electrical appliance to find its wattage. These generally work for those from the US traveling to destinations that use higher voltages to "step down" from 230V to 120V.

On the other hand, those who travel from a good portion of the world to the US will likely need a [transformer](#) to convert the lower line voltage into the higher voltage required by their appliances. Many of these devices (sometimes of higher quality and thus higher-priced) also function as step-down converters.

Given the complexities of safely using your electrical appliances overseas, you may want to consider some alternatives. If you plan on staying in one country for awhile, you might want to buy a hair dryer or electric razor there. Battery operated appliances are another option if you don't mind replacing the batteries.

WHAT ABOUT YOUR COMPUTER, camcorder, CD/DVD player, etc?

Fortunately, many portable computers today come with power supplies that can be used in almost any part of the world. Check the manufacturer's label to see what type of input it can handle. Those designed for use just about anywhere have a section on the label that looks something like this:

INPUT: AC 100V~ 240V~ 1.0A 50 / 60 Hz

This shows that the device was designed to be used over a wide range of voltage levels and at different electrical frequencies. In this particular example (based on an HP Omnibook 800CT), the computer can accept "nominal" voltage anywhere from 100 volts to 240 volts and can operate on either a 50 Hz or 60 Hz system. It is designed for alternating current (AC). Like most appliances, it should not be used on a direct current (DC) system. DC electrical systems are not common, but some do exist.

If you must take other types of electrical appliances with you abroad, your best bet is to buy travel-size dual-voltage appliances that can run on both 110 and 220-volt currents. Make sure the switch is on the proper voltage for the country you are in before using the appliance. You will also need to carry adapter plugs with you to fit the outlets in the countries you're visiting.

ELECTRIC PLUGS IN USE

The main types of electrical plugs that are used around the world are listed below. *Note: the illustrations below are not to scale. Also, the labels (type A, B, etc.) used by my principal source listed below are not any type of standard nomenclature; labels and descriptions used by [various vendors](#) may differ.*
