Populism and the Crisis of Democracy Gregor Fitz, Juergen Mackert, Bryan Turner, 2018-10-10 There is no threat to Western democracies today comparable to the rise of right wing populism While it has played an increasing role at least since the 1990s only the social consequences of the global financial crises in 2008 have given it its break that led to UK s Brexit and the election of Donald Trump as US President in 2016 as well as promoting what has been called left populism in countries that were hit the hardest by both the banking crisis and consequential neo liberal austerity politics in the EU such as Greece and Portugal In 2017 the French Front National FN attracted many voters in the French Presidential elections we have seen the radicalization of the Alternative f r Deutschland AfD in Germany and the formation of centre right government in Austria Further we have witnessed the consolidation of autocratic regimes as in the EU member states Poland and Greece All these manifestations of right wing populism share a

common feature they attack or even compromise the core elements of democratic societies such as the separation of powers protection of minorities or the rule of law Despite a broad debate on the re emergence of populism in the transition from the twentieth to the twenty first century that has brought forth many interesting findings a lack of sociological reasoning cannot be denied as sociology itself withdrew from theorising populism decades ago and largely left the field to political sciences and history In a sense Populism and the Crisis of Democracy considers itself a contribution to begin filling this lacuna Written in a direct and clear style this set of volumes will be an invaluable reference for students and scholars in the field of political theory political sociology and European Studies This volume Concepts and Theory offers new and fresh perspectives on the debate on populism Starting from complaints about the problems of conceptualising populism that in recent years have begun to revolve around themselves the chapters offer a fundamental critique of the term and concept of populism theoretically inspired typologies and descriptions of currently dominant concepts and ways to elaborate on them With regard to theory the volume offers approaches that exceed the disciplinary horizon of political science that so far has dominated the debate As sociological theory so far has been more or less absent in the debate on populism only few efforts have been made to discuss populism more intensely within different theoretical contexts in order to explain its dynamics and processes Thus this volume offers critical views on the debate on populism from the perspectives of political economy and the analysis of critical historical events the links of analyses of populism with social movement mobilisation the significance of superfluous populations in the rise of populism and an analysis of the exclusionary character of populism from the perspective of the theory of social closure

Globalization on the Margins (2nd Edition) Iveta Silova, Sarfaroz Niyozov, 2020-01-01 Reflecting on almost three decades of postsocialist transformations the second edition of Globalization on the Margins explores continuities and changes in Central Asian education development since the dissolution of the Soviet Union in 1991 with a particular focus on the developments that took place since the production of the first edition in 2011 Rather than viewing these transformations in isolation the authors place their analyses within the global context by reflecting on the interaction between Soviet legacies and global education reform pressures in the Central Asian countries of Kazakhstan Kyrgyzstan Tajikistan Turkmenistan and Uzbekistan This new edition in addition to a revised introduction and a newly added conclusion consists of four thematic sections each reflecting a key theme in the educational life of the Central Asian states These thematic sections introduction and conclusion collectively update our understanding of the recent developments and challenges in education of the five Central Asian states They however go beyond mere information update so as to complicate re engage re form and re define the margins taking up margins a conceptual geographic cultural and geo political construct Notwithstanding the diversity of local and international authors variety of theoretical perspectives methodological approaches and conceptual lenses the

essays reveal the complexity and uncertainty of the post socialist education transformations Instead of portraying the transition process as the influx of Western ideas into the region Globalization on the Margins provides new lenses to critically example education as a contested field of diverse perspectives competing forces and multidirectional flow of ideas concepts and reforms in Central Asia ENDORSEMENTS Hindsight famously brings clarity And much of what happened after the fall of the Berlin Wall and the collapse of the Soviet Union has now been correctly deeded over to historians Nonetheless we ignore that history at our peril The contributors to this volume show that carefully textured and historically attuned education research generates deep insights into ongoing transformations and the political cultural social and economic structures relations and practices that do the work of producing margins and centers in the first place Noah W Sobe Loyola University Chicago Globalization on the margins and at the epicentre of the battles of the Great Powers Two excellent educators Sarfaroz Niyozov and Iveta Silova compiled a timely and long awaited scholarly work based on empirical research in societies which had similar history close to three decades ago All the contributors are prolific educators who know the education system from within and without who either hailed from the region or have spent a considerable amount of time to know the systems well The book contains remarkable stories of education through the ups and downs of historical evolution It is a must read primer for anyone interested in learning about high quality research in the field of education in Central Asia It is a huge contribution to educational research with an impact on research and teaching for years to come Duishon Shamatov Nazarbayev University Kazakhstan The challenge of moving Central Asia from the borders of the Soviet Empire to the world s center is the focus of the discussions in Globalization on the Margins The transition to the Western models of education was happening in the context of major paradigm shift which entire humanity was experiencing and which could be described as the arrival of the new post industrial civilization During this process Central Asian countries have been pushed to the margins because their contribution to the wealth of the new world know how was much less pronounced than that of their Western neighbours Therefore investment into the research that contributes to local knowledge production seems a natural solution to the problem All the contributors to this book have a vast experience in the region and many of their observations are thought provoking This is a very insightful and much needed book Elena Lenskaya Moscow School of Social and Economic Sciences Russia

National History Standards Linda Symcox,Arie Wilschut,2009-04-01 As educators in the United States and Europe develop national history standards for K 12 students the question of what to do with national history canons is a subject of growing concern Should national canons still be the foundation for the teaching of history Do national canons develop citizenship or should they be modified to accommodate the new realities of globalization Or should they even be discarded outright These questions become blurred by the debates over

preserving national heritages by so called history wars or culture wars and by debates over which pedagogical frameworks to use These canon and pedagogical debates often overlap creating even more confusion A misconceived skills vs content debate often results Teaching students to think chronologically and historically is not the same as teaching a national heritage or a cosmopolitan outlook But what exactly is the difference Policy makers and opinion leaders often confuse the pedagogical desirability of using a framework for studying history with their own efforts to reaffirm the centrality of national identity rooted in a vision of their nation s history as a way of inculcating citizenship and patriotism These are the issues discussed in this volume Today s students are citizens of the world and must be taught to think in global supranational terms At the same time the traditionalists have a point when they argue that the ideal of the nation state is the cultural glue that has traditionally held society together and that social cohesion depends on creating and inculcating a common national culture in the schools From an educational perspective the problem is how to teach chronological thinking at all How are we to reconcile the social political and intellectual realities of a globalizing world with the continuing need for individuals to function locally as citizens of a nation state who share a common past a common culture and a common political destiny Is it a duty of history education to create a frame of reference and if so what kind of frame of reference should this be How does frame of reference knowledge relate to canonical knowledge and the body of knowledge of history as a whole

History of Computing: Learning from the Past Arthur Tatnall, 2010-08-06 History of Computing Learning from the Past Why is the history of computing important Given that the computer as we now know it came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history Isn t history about old things Computing of course goes back much further than 70 years with many earlier vices rightly being known as computers and their history is of course important It is only the history of electronic digital computers that is relatively recent History is often justified by use of a quote from George

Santayana who famously said that Those who cannot remember the past are condemned to repeat it It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future but there is some circularity in this question as the only way we will know the answer to this is to study our history This book contains papers on a wide range of topics relating to the history of computing written both by historians and also by those who were involved in creating this history The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010 *Cargoes from Three Continents* Marie Cleary, Mark J. Meister, 1999 A collection of teaching plans and related material designed to help teachers understand Mediterranean centred trade between 1600 BC and AD 200

Variants of Evolutionary Algorithms for Real-World Applications Raymond Chiong, Thomas Weise, Zbigniew Michalewicz, 2011-11-13 Evolutionary Algorithms EAs are population based stochastic search algorithms that mimic natural evolution Due to their

ability to find excellent solutions for conventionally hard and dynamic problems within acceptable time EAs have attracted interest from many researchers and practitioners in recent years This book Variants of Evolutionary Algorithms for Real World Applications aims to promote the practitioner s view on EAs by providing a comprehensive discussion of how EAs can be adapted to the requirements of various applications in the real world domains It comprises 14 chapters including an introductory chapter re visiting the fundamental question of what an EA is and other chapters addressing a range of real world problems such as production process planning inventory system and supply chain network optimisation task based jobs assignment planning for CNC based work piece construction mechanical ship design tasks that involve runtime intense simulations data mining for the prediction of soil properties automated tissue classification for MRI images and database query optimisation among others These chapters demonstrate how different types of problems can be successfully solved using variants of EAs and how the solution approaches are constructed in a way that can be understood and reproduced with little prior knowledge on optimisation
