especially the constitutional need to carefully monitor and respond to the reform initiatives and motives of executive government. Revisiting accounting issues and developments in the public sector and reminding readers that the fundamental purpose of government accounting is different from that for the business sector, this book provides a timely reminder of the need for caution when considering the application in the public sector of accounting techniques devised for business purposes. June Pallot's legacy challenges accountants in the public sector to find better ways of addressing collective decision making under new governance approaches, proposes ways forward and offers suggestions for future research. This book, prepared by her colleague Susan Newberry, is a tribute to June's work.

**Space Mining and Manufacturing** Davide Sivolella, 2019-12-05. This book produces convincing evidence that exploiting the potential of space could help solve many environmental and social issues affecting our planet, such as pollution, overcrowding, resource depletion, and conflicts, economic inequality, social unrest, economic instability, and unemployment. It also touches on the legal problems that will be encountered with the implementation of the new technologies and new laws that will need to be enacted and new organizations that will need to be formed to deal with these changes. This proposition for a space economy is not science fiction but well within the remit of current or under-development technologies. Numerous technologies are described and put together to form a coherent and feasible road map that, if implemented, could lead humankind towards a brighter future.
