Life Behind Barbed Wire Yasutaro Soga, 2007-10-01 Yasutaro Soga's *Life Behind Barbed Wire* Tessaku seikatsu is an exceptional firsthand account of the incarceration of a Hawaiian Japanese during World War II. On the evening of the attack on Pearl Harbor, Soga, the editor of a Japanese language newspaper, was arrested along with several hundred other prominent Issei Japanese immigrants in Hawaii. After being held for six months on Sand Island, Soga was transferred to an Army camp in Lordsburg, New Mexico, and later to a Justice Department camp in Santa Fe. He would spend just under four years in custody before returning to Hawaii in the months following the end of the war. Most of what has been written about the detention of Japanese Americans focuses on the Nisei experience of mass internment on the West Coast, largely because of the language barrier immigrant writers faced. This translation therefore presents us with a rare Issei voice on internment, and Soga's opinions challenge many commonly held assumptions about Japanese Americans during the war regarding race relations, patriotism, and loyalty. Although centered on one man's experience, *Life Behind Barbed Wire* benefits greatly from Soga's trained eye and instincts as a professional journalist, which allowed him to paint a larger picture of those extraordinary times and his place in them. The Introduction by Tetsuden Kashima of the University of Washington and Foreword by Dennis Ogawa of the University of Hawaii provide context for Soga's recollections based on the most current scholarship on the Japanese American internment. Materials for Springs, 2007-09-06 *Materials for Springs* is basically intended for engineers related to spring materials and technologies who graduated from metallurgical or mechanical engineering course in technical high school or in other higher engineering schools as well as those who are related to purchases or sales of spring materials. This book is the first comprehensive treatment in this specific topic. It is written by experts of the JSSE Japan Society of Spring Engineers.

Springer Handbook of Experimental Fluid Mechanics Cameron Tropea, Alexander L. Yarin, John F. Foss, 2007-10-09 Accompanying DVD-ROM contains all chapters of the Springer Handbook. Page 3 of cover *Spin-While-Burn* Mohd Shahr Bin Kasim, Muhammad Akmal Bin Mohd Zakaria, Saiful Bahri Bin Mohamed, 2024-04-01 This book explains the challenges and advancements in cutting precise cylindrical shapes on difficult materials through spark erosion. Titled *Spin while Burn*, it addresses the drawbacks associated with this process, including unsatisfactory surface finish and limited productivity. Despite utilizing advanced computing and statistical optimization methods, achieving the ideal balance between material removal rate (MRR) and surface quality remains elusive. In response, the book introduces a hybrid ultrasonic-assisted approach in the wire electrical discharge turning (WEDT) process. By integrating a rotating workpiece with ultrasonic vibration, the authors evaluate its impact on MRR and surface finish. Through meticulous design experiments and statistical analysis, they explore various

cutting parameters and machining paths The book highlights the characterization of machined surfaces through elemental analysis and surface morphology evaluations The results demonstrate the positive effects of integrating ultrasonic vibration into WEDT even without optimized ultrasonic parameters By reducing electrode wire debris and employing multi objective parameter optimization using the genetic algorithm significant improvements are achieved in MRR and surface roughness compared to conventional WEDT Spin while Burn consists of five chapters delving into the challenges history principles performance and future perspectives of the Spin while Burn process in manufacturing This comprehensive book offers valuable insights into enhancing surface quality and productivity in the cutting of precise cylindrical shapes on challenging materials through spark erosion Official Gazette of the United States Patent and Trademark Office ,2002 **Science**

Cylindrical Liner Z-pinches as Drivers for Converging Strong Shock Experiments Guy C. Burdiak, 2014-06-06 The thesis represents the development of an entirely new experimental platform for generating and studying converging radiative shock waves It was discovered that the application of large magnetic pressures to gas filled cylindrical metallic tubes could sequentially produce three shocks within the gas A comprehensive set of instrumentation was devised to explore this system in detail and an exceptionally thorough experimental and theoretical study was carried out in order to understand the source of the shock waves and their dynamics The research is directed towards some of the most interesting topics in high energy density physics HEDP today namely the interaction of HED material with radiation and magnetic fields with broad applications to inertial confinement fusion ICF and laboratory plasma astrophysics The work has already generated significant international interest in these two distinct research areas and the results could have significant importance for magnetic ICF concepts being explored at Sandia National Laboratories in the US and for our understanding of the very
