Long Strange Journey Gregory P. A. Levine, 2017-09-30 Long Strange Journey presents the first critical analysis of visual objects and discourses that animate Zen art modernism and its legacies with particular emphasis on the postwar Zen boom Since the late nineteenth century Zen and Zen art have emerged as globally familiar terms associated with a spectrum of practices beliefs works of visual art aesthetic concepts commercial products and modes of self fashioning They have also been at the center of fiery public disputes that have erupted along national denominational racial ethnic class and intellectual lines Neither stable nor strictly a matter of euphoric religious or intercultural exchange Zen and Zen art are best approached as productive predicaments in the study of religion spirituality art and consumer culture especially within the frame of Buddhist modernism Long Strange Journey s modern contemporary emphasis sets it off from most writing on Zen art which focuses on masterworks by premodern Chinese and Japanese artists gushes over timeless visual qualities as indicative of metaphysical states or promotes with ahistorical trend spotting flair Zen art s design appeal and therapeutic values In contrast the present work plots a methodological through line distinguished by discourse analysis moving from the first contacts between Europe and Japanese Zen in the sixteenth century to late nineteenth early twentieth century transnational exchanges driven by Japanese Buddhists and intellectuals and the formation of a Zen art canon to postwar Zen transformations of practice and avant garde expressions to popular embodiments of our Zenny zeitgeist such as Zen cartoons The book presents an alternative history of modern contemporary Zen and Zen art that emphasizes their unruly and polythetic prototypical natures taking into consideration serious religious practice and spiritual and creative discovery as well as conflicts over Zen s value amid the convolutions of global modernity squabbles over authenticity resistance against the notion of Zen influence and competing claims to speak for Zen art made by monastics lay advocates artists and others

The Non-halogenated Flame Retardant Handbook Alexander B. Morgan, Charles A. Wilkie, 2014-04-07 A one stop practical handbook containing all of the current commercial non halogenated flame retardant technologies as well as experimental systems near commercialization In response to the emphasis on replacing halogenated flame retardants with alternate technologies this handbook focuses on existing non halogenated flame retardants and the experimental close to production systems that are available today The Non Halogenated Flame Retardant Handbook starts with an overview of the regulations and customer perceptions driving non halogenated flame retardant selections over older halogenated technologies It then moves on to cover the known major classes of non halogenated flame retardants before concluding with the current niche performing technologies and untried commercial contenders of the future The Non Halogenated Flame Retardant Handbook Takes a practical approach to addressing the narrow subject of non halogenated flame retardancy placing more emphasis on flame retardant selection for specific plastics practical considerations in flame retardant material design and the various technologies strengths and limits Focuses on the proper use of non halogenated flame retardants

rather than the mechanics of how they work Discusses important future trends in flame retardancy Features sections written by industrial and chemical experts who know how to apply the technology to polymers for fire safety needs *Recent Progress in Many-Body Theories* H. Ugen, Mauro Bendinelli, Herman Friedman, 2006-04-11 The discovery of the human T cell leukemia virus type I in the late 1970s heralded a new era in retrovirology For the first time it was demonstrated that a retrovirus could play a role in the development of a human disease in this case adult T cell leukemia ATL Several years later the acquired immunodeficiency syndrome AIDS epidemic began and it was demonstrated that a retrovirus originally designated the human T cell lymphotropic virus type 3 was the causal agent of this syndrome This virus later named the human immunodeficiency virus type 1 HIV 1 has since been extensively studied in terms of its pathogenesis as well as its ability to elicit immune responses In that time a tremendous amount of information has been obtained about the virus Although recent drug regimens have been useful in significantly lowering viral loads and perhaps maintaining an asymptomatic state among individuals infected with HIV 1 an established cure for AIDS eludes us In addition the effective drug therapies are very expensive and are not available to infected people in

the third world where greater than 90% of new infections occur Furthermore the development of viral resistance against the drug therapies is an additional concern Despite extensive study no effective vaccine has been developed One of the problems in developing an effective vaccine against HIV 1 is the ability of the virus particularly in the immunogenic envelop glycoprotein to undergo amino acid hypervariability

Nanomaterials in Catalysis Philippe Serp,Karine Philippot,2012-11-15 Nanocatalysis has emerged as a field at the interface between homogeneous and heterogeneous catalysis and offers unique solutions to the demanding requirements for catalyst improvement Heterogeneous catalysis represents one of the oldest commercial applications of nanoscience and nanoparticles of metals semiconductors oxides and other compounds have been widely used for important chemical reactions The main focus of this field is the development of well defined catalysts which may include

both metal nanoparticles and a nanomaterial as the support These nanocatalysts should display the benefits of both homogenous and heterogeneous catalysts such as high efficiency and selectivity stability and easy recovery recycling The concept of nanocatalysis is outlined in this book and in particular it provides a comprehensive overview of the science of colloidal nanoparticles A broad range of topics from the fundamentals to applications in catalysis are covered without excluding micelles nanoparticles in ionic liquids dendrimers nanotubes and nanooxides as well as modeling and the characterization of nanocatalysts making it an indispensable reference for both researchers at universities and professionals in industry

Dynamics of Ordering Processes in Condensed Matter S.

Komura, 2012-12-06 The International Symposium on Dynamics of Ordering Processes in Condensed Matter was held at the Kansai Seminar House Kyoto for four days from 27 to 30 August 1987 under the auspices of the Physical Society of Japan The symposium was financially supported by the four organizations and 45 companies listed on other pages in this volume We are very grateful to all of them and particularly to the greatest sponsor the Commemorative Association for the Japan World Exposition 1970 A total of 22 invited lectures and 48 poster presentations were given and 110 participants attended from seven nations An objective of the Symposium was to review and extend our present understanding of the dynamics of ordering processes in condensed matters for example alloys polymers and fluids that are brought to an unstable state by sudden change of such external parameters as temperature and pressure A second objective no less important was to identify new fields of science that might be investigated by similar but sometimes more sophisticated concepts and tactics An emphasis was laid on those universal aspects of the laws governing the ordering processes which transcended the detailed differences among the substances used The 71 lectures reproduced in this volume bear witness to the success of the

Symposium in meeting amply the first objective and to a lesser extent the second Handbook of Magnetic Materials K.H.J.
