**Handbook of Starch**

**Science and Technology** Ming Miao, Long Chen, James N. BeMiller, 2025-04-01 Fifteen years have passed since the last major treatise on starch was published. Since then, knowledge of the molecular and macromolecular structures of starch, exploration of new sources of commercial starch, modification of the properties of starches via chemical, enzymic, genetic, and physical means, and investigations into potential uses of new products have proliferated. The Handbook of Starch Science and Technology explores new developments in starch science and technologies to achieve new paradigms in the development of natural glucose polymers. New developments of starches with enhanced nutritional and health benefits and specialized starch derivatives are discussed in terms of novel applications for the design of functional products and recent developments for structuring starch that have not been covered in the previous literature. Further, it discusses the uses of starch in the manufacture of starch inclusion complexes and nanoparticles and as a key component in carrier delivery applications. Features: Explores the genetics and physiology of starch biosynthesis; Covers the source, isolation, structure, and properties of starches; Identifies the structure and behavior of typical components in starch: amylose, amylopectin, and phytyglycogen; Includes specific information on the modification and application of starch derivatives; Presents current and emerging trends for starch science and technology. This timely guide is for scientists and technologists working in the fields of agriculture, biotechnology, food, pharmaceuticals, chemical engineering, nutrition, and human health.

**Exploring the future landscape of new food sources and production systems** Food and Agriculture Organization of the United Nations, Mukherjee, K.; Trieb, J.; Niegowska Conforti, M.; Di Martino, M.; Fattori, V.; Lipp, M., 2025-04-17 Agrifood systems are undergoing significant changes driven by technological advances, scientific discoveries, and the need to become more sustainable and resilient. In response, new food sources and production systems (NFPS) are emerging worldwide with the potential to alter the global food landscape over the next 5 to 25 years. The FAO Food Safety Foresight Programme conducted a multi-phase foresight exercise to explore potential food safety implications of emerging new food sources and production systems. Through expert consultations and a structured methodology combining a two-part Delphi survey and mind mapping, the exercise identified 44 emerging innovations across nine clusters expected to develop between now and 2050. The exercise revealed both opportunities and challenges associated with the innovations, highlighting the need for proactive preparation by food safety authorities and other stakeholders to ensure the safe development and implementation of these innovations while protecting public health. Several steps were identified as necessary to achieving this: improving communication on the safety implications of NFPS; fostering technical advancement for safety assurance; developing tailored safety assessments; encouraging collaboration between regulators and industry; and harmonizing regulatory requirements while maintaining safety standards. The findings also highlighted various social, technological, economic, environmental, and political issues that must be addressed for the safe integration of these innovations into food systems. Continuous monitoring and assessment of emerging NFPS issues is crucial to better understand the long-term implications for food safety and public health.
