Real Business of IT Richard Hunter, George Westerman, 2009-10-13 If you're a general manager or CFO do you feel you're spending too much on IT or wishing you could get better returns from your IT investments If so it's time to examine what's behind this IT as cost mind set In *The Real Business of IT* Richard Hunter and George Westerman reveal that the cost mind set stems from IT leaders inability to communicate about the business value they create so CIOs get stuck discussing budgets rather than their contributions to the organization The authors explain how IT leaders can combat this mind set by first using information technology to generate three forms of value important to leaders throughout the organization Value for money when your IT department operates efficiently and effectively An investment in business performance evidenced when IT helps divisions units and departments boost profitability Personal value of CIOs as leaders whose contributions to their enterprise go well beyond their area of specialization The authors show how to communicate about these forms of value with non IT leaders so they understand how your firm is benefiting and see IT as the strategic powerhouse it truly is

Action Policies Raphael Romeikat,2014 IT systems have a high impact on organizations and businesses today and are a key to globalization Evolution of complexity calls for changes in the way these systems are built and managed As a consequence a paradigm shift towards Model Driven Engineering and Policy Based Management can be observed both aiming at a better management of complexity A lot of human effort is still necessary to develop and operate complex systems In this thesis an innovative approach to reduce that effort is presented Domain specific models are used to describe the IT system and its behavior at a high level of abstraction initially They are refined into technical representations at lower levels and finally transformed into event condition action policies These executable policies define which actions must or must not be performed to achieve the objectives of the system The refinement of models and the generation of policy implementations are both fully automated As high level changes are automatically materialized in the respective policies system behavior can be adapted at runtime simply by changing the high level models This allows to operate even complex systems without considering their technical details Finally the correctness of the refinement is proven with a relational algebra The benefits of the approach are demonstrated and evaluated with two real world case studies dealing with the management of mobile networks and the calculation of bonus payments The Velocity Advantage Jack Bergstrand,2016-11-15 Are you drowning in useless meetings Your projects crushed by the weight of too many stakeholders What if you could achieve better faster and more meaningful outcomes at work and in your career The way we work now is based on industrial age thinking back when waste was measured by the scrap pile at the end of the assembly line Today s waste is often invisible but it s just as fatal for companies and careers Seventy percent of all projects fail And big companies no longer beat small ones Fast companies beat slow ones and their velocity comes from getting the right people engaged at the right time in the right way By redefining teamwork for the 21st century The Velocity Advantage will help you achieve better and faster results with less effort and aggravation The former CIO of Coca Cola and founder of Brand Velocity and Consequent consulting Jack Bergstrand s revolutionary ideas are based on 35 years of research and experience across a wide range of companies and industries Gain valuable insights about your personality type and learn how you can work with others in a new way with more impact energy and personal engagement Success is not about speed or direction It requires speed and direction This book shows how to achieve both Break free of industrial age thinking Make sense of cross functional chaos Discover a better way to work with The Velocity Advantage *Estimating Software-Intensive Systems* Richard D. Stutzke,2005-04-26 Many software projects fail because their leaders don t know how to estimate schedule or measure them accurately Fortunately proven tools and techniques exist for every facet of software estimation Estimating Software Intensive Systems brings them together in a real world guidebook that will help software managers engineers and customers immediately improve their estimates and drive

Andrew Davison, 2007-12-13 Projects which implement major business and technology change have been and will continue to be risky ventures The chance of success is generally well below 50% However there are well established proven practices that can reduce the risks of failure dramatically The challenge is to identify and apply the best practices that deliver maximum value for each change initiative Project Pre Check gathers these best practices for consideration by a project's key stakeholders the guiding coalition for a change It is based on this premise if the key stakeholders for a given change are actively involved in and agree with each decision and all the vital decisions are addressed the project will be successful Project Pre Check includes three building blocks to ensure project success Stakeholders Processes and the Decision Framework These building blocks provide the key decision makers with a roadmap to success and the best practice framework to ensure successful change Project Pre Check includes planning governance and project assessment processes to facilitate active stakeholder involvement very early in a project's life cycle It enables rapid assessment of stakeholder agreement on 125 key decision areas to identify gaps that may require remedial action It can be applied effectively in the pre launch stages as part of or immediately after project initiation up until solution delivery and on a release by release basis Whenever it's used it will help identify and remove those fatal flaws that can lead to project ruin
