Monographs for Quality Evaluation of Chinese Crude Drugs, 2015-07-23 Today the chemical analysis is the dominant direction of the quality control system of TCM and natural medicines But it is difficult to measure the quality for TCM herbs by detecting solely the presence absence of a single or small number of marker components at very low concentration especially for the herbs derived from multiple origins and produced from wide localities as well as those with unknown principle bioactive components From this standpoint it is necessary to use multidisciplinary technologies integrating the morphological authentication and chemical analysis qualitative detection and quantitative determination and physicochemical analysis and bioassay in order to distinguish the authentic herb from the adulterant the superior from the inferior and to improve the standards of TCM herbs This book includes 60 commonly used TCM herbs each involving the following items definition location action and indication description microscopic identification TLC identification HPLC GC fingerprint identification optional assay discussion and references It is a valuable reference of quality evaluation for TCM herbs

Evidence and Rational Based Research on Chinese Drugs Hildebert Wagner, Gudrun Ulrich-Merzenich, 2013-02-11. After the successful introduction of acupuncture to the West, recent advances in analytical methods in chemistry, molecular biology and systems biology, especially the development of the omic technologies, have again brought Chinese drugs into the focus of research on Traditional Chinese Medicine (TCM). With more than 1000 publications on the chemistry, molecular biology and pharmacology of TCM drugs in international journals over the last 10 years, Chinese drugs are gaining increasingly reputation and impact. These data offer great opportunities for the development of new pharmaceuticals for various clinical applications. International scientists have compiled relevant and trend setting research results in this book. Topics range from the latest methods of quality and safety assurance by chemical and genetic fingerprints to the development of new pharmaceuticals for a future evidence based therapy e.g. for cancer, cardiovascular, inflammatory or infectious diseases as well as to recent experimental results on multitarget and synergy research for the preparation of multi extract pharmaceuticals from TCM. **Handbook of 200 Medicinal Plants** Shahid Akbar, 2020-04-21. This book is designed to provide pharmacologists and researchers of natural products a comprehensive review of 200 medicinal plants, their vernacular names in various languages and their medicinal uses around the world and in some cases a historical perspective. Chemical constituents of each plant with the putative active constituent and available up to date pharmacological studies.

until 2017 on PubMed with each medical activity explored and its relationship with traditional uses are described for each plant. Any variations in chemical constituents and their effects on pharmacological studies outcome have been highlighted. All clinical trials conducted with sufficient details have been included. Nationalities and racial identities of participants of clinical trials are identified to impress upon the social cultural and dietary influences on the clinical outcomes. Toxicity studies and potential interactions with prescribed drugs and full spectrum of references are included. Liquid Chromatography Y. Shen, T.A. van Beek, H. Zuilhof, B. Chen, 2013-01-08. A characteristic of traditional medicinal practices such as traditional Chinese medicines TCMs and Indian ayurveda is the abundant use of plants as drugs. However the bottleneck in the use of herbal drugs is the control of their safety effectiveness and quality. Good quality control QC is necessary to achieve the standards of modern medicines. Liquid chromatography being a powerful universal separation technique is widely available in laboratories and easily hyphenated with other spectroscopic and biochemical techniques. A number of LC based strategies such as multicomponent quantitation, fingerprinting, bioaffinity chromatography and on flow assays for screening have been used for the comprehensive QC of TCMs, lead finding and identification of active constituents. In this chapter the applications and development of such LC based methods for TCMs and other herbal drugs are presented and discussed. Some future trends are given. *Data Analytics for Traditional Chinese Medicine Research* Josiah Poon, Simon K. Poon, 2014-02-19. This contributed volume explores how data mining, machine learning and similar statistical techniques can analyze the types of problems arising from Traditional Chinese Medicine TCM research. The book focuses on the study of clinical data and the analysis of herbal data. Challenges addressed include diagnosis, prescription analysis, ingredient discoveries, network based mechanism deciphering, pattern activity relationships and medical informatics. Each author demonstrates how they made use of machine learning, data mining, statistics and other analytic techniques to resolve their research challenges, how successful if these techniques were applied, any insight noted and how these insights define the most appropriate future work to be carried out. Readers are given an opportunity to understand the complexity of diagnosis and treatment decision, the difficulty of modeling of efficacy in terms of herbs, the identification of constituent compounds in an herb, the relationship between these compounds and biological outcome so that evidence based predictions can be made. Drawing on a wide range of experienced contributors, *Data Analytics for Traditional Chinese Medicine Research* is a valuable reference for professionals and researchers working in health informatics and data mining. The techniques are also useful for biostatisticians and health practitioners interested in traditional medicine and data analytics. *Comprehensive Guide To Chinese Medicine, A (Second Edition)* Ping-chung Leung, 2015-09-07. The Second Edition of this book is a rearranged and enriched version of the previous edition composed of feedback and constructive comments from readers. Acupuncture is the most popular form of treatment in Chinese medicine. The theories and practice of acupuncture have been revised and rewritten to give readers a clear idea of how it works and when it is to be utilized. Botanicals i.e. herbal medicine form the major core of Chinese medicine practice.

The potential of botanicals development is wide from casting specific biological activities to preventive uses Three new chapters are offered i for the understanding of the biological activities of herbal medicine ii the products produced from herbs for specific needs and iii the individual's choice for what may suit him/her best In this present era of information technology readers should be guided on the use of the Internet and related areas in order to independently secure information for personal use and research needs The last chapter is provided for this practical purpose Since the publication of the First Edition much development has occurred in the field of Chinese medicine All the chapters have been updated and revised accordingly so that general readers those looking for effective treatment as well as those who want to serve their patients better can have a reliable comprehensive reference
