**The Metaphorical Meanings of the Color Term Black** Lena Groß, 2014-02-26 Seminar paper from the year 2012 in the subject Didactics for the subject English Miscellaneous grade 3 0 Johannes Gutenberg University Mainz language English abstract This paper is to demonstrate the varied metaphorical meaning of the color term black Despite the fact that colors play an important role in everyday life and occur everywhere they do not receive much attention Therefore using the example of black the author s intention is to illustrate the importance of a color and the correlations people unconsciously make First of all with the help of some literature and common phrases in society positive and negative associations of black are collected Afterwards the grouped characteristic significances of black are compared to two dictionaries namely the Oxford English Dictionary and the Longman English Dictionary to see if there is a difference between the symbolism of black and its original denotation Following the metaphorical meanings of black are collocated by means of The Corpus of Contemporary American English to analyze its actual occurrences in language use Concluding black has a wide range of meanings but is predominantly combined with a negative connotation Some associations only exist in society or special literature because the transfer to sorrow or death cannot be found in a dictionary or corpus This is because dictionaries and the corpus cover the general and literal linguistic usage of black and not its entire symbolism which arose over a period of years and does not explicitly contain the word black

Aine,2000-06-16 A modified Linear Estimation Approach was performed to reconstruct current sources within the heart Based on MRI data sets the Boundary Element Method was used to create tailored multicompartment models of the human thorax which were used to solve the forward problem of magnetocardiography The ability of the proposed method was demonstrated for the localization of a single current dipole as an example of a focal source By means of introducing small shiftings to all reconstruction dipoles during linear estimation solution as well as performing a successive focussing strategy ignoring places without significant electrical activity the method could easily be extended to the reconstruction of real 3D sources Based on a special minimum norm solution the source volume can be estimated applying a finite element approximation using cube elements The size of an extended current source can be estimated by superimposing the reconstructed dipoles to an equivalent dipole and comparing the corresponding volume with the sphere which would be related to the equivalent dipole The deviation of these volumes can be taken as a criterion for non dipolarity of sources
