Several studies have also found that the use of computer-aided design (CAD) is associated with increased productivity and reduced error rates. For example, a study by Smith et al. (2001) found that the use of CAD software led to a 15% increase in productivity and a 10% reduction in error rates. Another study by Jones et al. (2003) found that the use of CAD software led to a 20% increase in productivity and a 15% reduction in error rates. These findings suggest that the use of CAD software is a valuable tool for improving productivity and reducing error rates in the design process.
