LUBRICATION

The power head is lubricated by oil mixed with the fuel. Fuel/oil ratio should be 50:1 during break-in of a new or rebuilt engine and 50:1 for normal service when using a SAE certified two-stroke engine oil or Suzuki "OCF" oil. When using any other type of two-stroke engine oil, fuel/oil ratio should be 20:1 during break-in and 20:1 for normal service. Manufacturer recommends

regular or no-load automotive gasoline having an 85-95 octane rating. Gasoline and oil should be thoroughly mixed.

The lower unit gears and bearings are lubricated by oil contained in the gearcase. SAE 90 hypoid outboard gear oil should be used. Gearcases with exhaust outlet to gearcase require 180 mL of gear oil while through-the-propeller exhaust models require 300 mL of gear oil. Ballast vent and oil plug(s) securely using a new gasket, if necessary, to ensure a water tight seal.

FUEL SYSTEM

CARBURETOR. A Mikuni carburetor is used on all models. Refer to Fig. S28-1 for exploded view. Initial setting of pilot air screw (5) from a lightly seated position should be 1 1/2 turns on DT20 models and 1 1/4 to 1 1/2 turns on DT25 models. Final carburetor adjustment should be made with engine at normal operating temperature and running in forward gear. Adjust throttle stop

The Authority of Experience John Pickering,2013-12-02 This collection of writings presents contemporary views on the integration of Buddhism in the West Over the past few decades Buddhism has deepened its presence in the West and as a result teachings and practices are becoming integrated with those of Western psychology in a more productive way The decline of mechanism and positivism offers new opportunities to bring together Western Buddhist views of the mind and its relationship to its surroundings Written by psychologists and scholars the essays discuss many of the difficult questions raised by Buddhism s increased presence In particular the issue of the balance between authenticity and accessibility is examined Buddhist traditions are often perceived as inaccessible and too firmly fixed to a cultural framework with some people especially women left feeling alienated and undervalued However by responding to this by attempting to synthesise Buddhism with the values of contemporary culture can lead to doubts about authenticity and dilution Examining these issues and many more the contributors seek to bring Buddhism into a realistic and informed relationship with contemporary Western thought

Psychological Adaptive Mechanisms Thomas P. Beresford, MD,2012-05-01 This book will demonstrate how to use novel systematic method for recognizing psychological adaptive mechanisms known in psychoanalytic theory as ego defenses in clinical encounters This clinical method is based in published theoretical and empirical studies of these mechanisms over the past 14 years as well as working with successive classes of mental health trainees of varying disciplines at the University of Colorado The result is an approach that trainees both apprehend and find

useful This work will offer the mental health disciplines and even wider audiences a platform both for 1 clinical use in everyday practice 2 continuing clinical studies of adaptive psychology as well as 3 direct application of psychological adaptive mechanisms theory in clinical research that will improve the diagnosis and treatment of persons with mental or emotional disorders This an important empirical model for understanding how humans adapt to the stressful experiences of their lives They have developmental biological and evolutionary significance and all of these will be discussed in the book Psychological Adaptive Mechanisms are observable behaviors that range on a developmental hierarchy from the Primitive defenses of normal early childhood and of major mental illness in adults through the Mature defenses of fully functioning adulthood They also serve to limit and to direct the human anxiety response giving the fight or flight reaction to threat many more than those two classically described behavioral options These mechanisms are likely transduced by the brain and in providing wider ranges of adaptive behavior most probably reflect an evolutionary selection towards greater flexibility of adaptation

Boating, 1978-07 **The Scientific Practice of Professional Psychology** Steven J. Trierweiler, George Stricker, 1997-11-30 A workable vision of scientific practice has proven to be an elusive if laudable goal for professional psychology The field cannot be faulted for failing to seek scientific wisdom but it has been slow to integrate that wisdom fully with the wisdom of practice This has proven to be a major oversight for despite psychology's long if the standing commitment to science practitioners are unlikely to think scientifically methods and products of science are described in ways that make it impossible to do so Unfortunately the rhetoric of science too often has done just that So focused has it been on the problem of distinguishing good science from bad that it has inadvertently defeated any hope of a practical science developing in our field We offer one remedy for this situation This book is about scientific thinking for the professional psychologist Specifically it is a primer on the application of scientific logic to professional practice We argue that the professional needs a more straightforward and realistic scientific identity than heretofore has been available The professional consciously must become a local clinical scientist bringing all the power of scientific thought to the specifics of the clinical situation Contrary to forces in psychology that promote uncritical acceptance of science as given by academic researchers or alternatively that encourage criticism and ultimate disregard of the scientific endeavor we call for a redoubling of efforts to incorporate scientific thought into practical professional inquiry
