Stephen Colbert Bonnie Szumski, Jill Karson, 2012-03-16 On his television show *The Colbert Report* which aired on Comedy Central from 2005 to 2014, Colbert played the nation's fool. By good naturedly mocking the mainstream media, politicians, and others, he made pointed commentary on how those in power attempt to both manipulate and win the trust of the American public. In 2015, Colbert began hosting his own late night show *The Late Show with Stephen Colbert* where he interviews guests and continues to cover important political and cultural events. His accolades have been serious and prestigious. Colbert has been named one of Time magazine's 100 Most Influential People twice. He has also received Emmy awards, Peabody awards, and an honorary doctorate degree from Knox College. Special attention is paid to explaining the philosophy behind Colbert's comedic personas, reasons for his popularity, and examples of his cultural influence.

The International Space Station Robert C. Dempsey, 2017 Looks at the operations of the International Space Station from the perspective of the Houston flight control team under the leadership of NASA's flight directors who authored the book. The book provides insight into the vast amount of time and energy that these teams devote to the development, planning, and integration of a mission before it is executed. The passion and attention to detail of the flight control team members who are always ready to step up when things do not go well is a hallmark of NASA human spaceflight operations. With tremendous support from the ISS program office and engineering community, the flight control team has made the International Space Station and the programs before it a success.

Beyond Genius Eric Elfman, Scott Griffiths, 2012-12-29 What do Richard Branson, Quincy Jones, Yvon Chouinard, David E. Stewart, Elon Musk, Frank Nuovo, John Paul DeJoria, and Steve Jobs have in common with Benjamin Franklin, Leonardo da Vinci, Teddy Roosevelt, Thomas Jefferson, and Sir Isaac Newton? They all share the 12 Essential Traits of the Renaissance Man. BEYOND GENIUS travels through history to determine the 12 essential traits that define a Renaissance Man, then applies those attributes to determine some of the Renaissance Men of today. We tell their stories of determination and perseverance, their expertise in a variety of fields, their insatiable curiosity, the infusion of their wisdom and creativity into our culture. We explore the making of a Renaissance Man and the deep connection these men have to advancements in the sciences, the arts, and our way of being. Scott Griffiths, Eric Elfman, and their team have put more than 1,000 hours of research into studying the history of the Renaissance Man, identifying common attributes that are constant throughout time, and identifying a select group of today's most successful Renaissance Men. By understanding these traits, identifying and developing them, the inner Renaissance Man can be unleashed in more men for the betterment of the world.

The Jon Stewart Show and later Comedy Central's The Daily Show in 1999. Although Stewart maintains that he is a comedian, he often blurs the line between comedy and journalism. His journalistic integrity has been praised by many, and he has been honored by the White House and the Peabody Awards. All you need to know about Jon Stewart is right here, right now, in the most up-to-date coverage of his life. It is said that there are two Stephen Colberts. One pronounces his surname with the 't' silent and is known around the world as the right-wing, well-intentioned, poorly informed, high-status idiot host to the extremely popular fake news show The Colbert Report featured on Comedy Central. The second Stephen Colbert, who pronounces the 't' in his surname, is less known. He is a private man who lives what he calls a normal life in New Jersey with his wife and three children. This unauthorized biography follows Colbert from his early career all the way to The Colbert Report and explores what is known about his childhood and details his career all the way up through the creation of his recent Super PAC.

Outposts on the Frontier Jay Chladek, 2017-08 The International Space Station (ISS) is the largest man-made structure to orbit Earth and has been conducting research for close to a decade and a half. Yet it is only the latest in a long line of space stations and laboratories that have flown in orbit since the early 1970s. The histories of these earlier programs have been all but forgotten as the public focused on other higher-profile adventures such as the Apollo moon landings. A vast trove of stories filled with excitement, danger, humor, sadness, failure, and success. *Outposts on the Frontier* reveals how the Soviets and the Americans combined strengths to build space stations over the past fifty years. At the heart of these scientific advances are people of both greatness and modesty. Jay Chladek documents the historical tapestry of the people, the early attempts at space station programs, and how astronauts and engineers have contributed to and shaped the ISS in surprising ways. *Outposts on the Frontier* delves into the intriguing stories behind the USAF Manned Orbiting Laboratory, the Almaz and Salyut programs, Skylab, the Apollo Soyuz Test Project, Spacelab, Mir station, Spacehab, and the ISS, and gives past due attention to Vladimir Chelomei, the Russian designer whose influence in space station development is as significant as Sergei Korolev's in rocketry. *Outposts on the Frontier* is an informative and dynamic history of humankind's first outposts on the frontier of space.

The Crowded Universe Alan Boss, 2009-02-03 We are nearing a turning point in our quest for life in the universe: we now have the capacity to detect Earth-like planets around other stars. But will we find any? In *The Crowded Universe*, renowned astronomer Alan Boss argues that based on what we already know about planetary systems, in the coming years we will find abundant Earths, including many that are indisputably alive. Life is not only possible elsewhere in the universe, Boss argues; it is common. Boss describes how our ideas about planetary formation have changed radically in the past decade and brings readers up to date on discoveries of bizarre inhabitants of various solar systems, including our own. America must stay in this new space race, Boss contends, or risk being left out of one of the most profoundly important discoveries of all time: the first confirmed finding of extraterrestrial life.
