Reconstruction by Space Carving Using Graphics Hardware Christian Nitschke, 2007-03-05 Inhaltsangabe Introduction Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There is a relation to Augmented and Mixed Reality AR MR Computer Supported Collaborative Work CSCW Computer Aided industrial architectural Design CAD modeling of the real world e g computer games scenes effects in movies entertainment e g 3D TV Video and recognition analyzing of real world characteristics by computer systems and robots There exists a powerful algorithm theory for shape reconstruction from arbitrary viewpoints called shape from photo consistency However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for shape from photo consistency Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The thesis is organized as follows Chapter 1 contains an introduction giving an overview with classification of related techniques statement of the main problem novelty of the proposed approach and its fields of application Chapter 2 surveys related work in the area of dynamic scene reconstruction by shape from silhouette and shape from photo consistency The focus lies on high performance reconstruction and hardware acceleration Chapter 3 introduces the theoretical basis for the proposed **Situated Communication** Gert Rickheit, Ipke Wachsmuth, 2008-08-22 This volume

presents important results of the Collaborative Research Center Sonderforschungsbereich Situated Artificial Communicators which was funded by grants from the German Research Foundation Deutsche Forschungsgemeinschaft for more than twelve years The contributions focus on different aspects of human human and human machine interaction in situations which closely model everyday workplace demands The authors are linguists psycho und neurolinguists psychologists and computer scientists at Bielefeld University They jointly tackle questions of information processing in task oriented communication The role of key notions such as context integration of multimodal information reference coherence and robustness is explored in great depth Some remarkable findings and recurrent phenomena reveal that communication is to a large extent a matter of joint activity The interdisciplinary approach integrates theory description and experimentation with simulation and evaluation

Computer Analysis of Images and Patterns Wladyslaw Skarbek, 2003-06-30 Computer analysis of images and patterns is a scientific field of longstanding tradition with roots in the early years of the computer era when electronic brains inspired scientists Moreover the design of vision machines is a part of humanity's dream of the artificial person I remember the 2nd CAIP held in Wismar in 1987 Lectures were read in German English and Russian and proceedings were also only partially written in

English The conference took place under a different political system and proved that ideas are independent of political walls A few years later the Berlin Wall collapsed and Professors Sommer and Klette proposed a new formula for the CAIP let it be held in Central and Eastern Europe every second year There was a sense of solidarity with scientific communities in those countries that found themselves in a state of transition to a new economy A well implemented idea resulted in a chain of successful events in Dresden 1991 Budapest 1993 Prague 1995 Kiel 1997 and Ljubljana 1999 This year the conference was welcomed at Warsaw There are three invited lectures and about 90 contributions written by more than 200 authors from 27 countries Besides Poland 60 authors the largest representation comes from France 23 followed by England 16 Czech Republic 11 Spain 10 Germany 9 and Belarus 9 Regrettably in spite of free registration fees and free accommodation for authors from former Soviet Union countries we received only one accepted paper from Russia
