often overlooked creatures of the deep such as tubeworms, hatchetfish, siphonophores and cephalopods which are typically cast as alien. Alaimo shows how depictions of the deep seas have been enmeshed in long colonial histories and racist constructions of a threatening abyss. Drawing on feminist environmentalism, posthumanism, science and technology studies and Indigenous and non-Western perspectives, Alaimo details how our understanding of science is fundamentally altered by aesthetic encounters with these otherworldly life forms. She argues that although the deep sea is often thought of as a lifeless void with little connection to human existence, our increasing devastation of this realm underscores our ethical obligation to protect the biodiverse life in the depths. When the abyss stares back, it demands recognition. Handbook of Ecocriticism Greg Garrard, 2014. The Oxford Handbook of Ecocriticism provides a broad survey of the longstanding relationship between literature and the environment. The moment for such an offering is opportune in many respects: multiple environmental crises are increasingly inescapable at both transnational and local levels; the role of the humanities in addition to technology and politics is increasingly recognized as central for exploring and finding solutions; and the subject of ecocriticism has reached a kind of critical mass both within its Anglo-American heartlands and beyond. From its origins in the study of American Nature Writing and British Romanticism, ecocriticism has developed along numerous theoretical, historical, cultural and geographical axes, the most contemporary and exciting of which will be represented in the Handbook. The contributors include eminent founders of the field, including Cheryll Glotfelty and Jonathan Bate, a number of key second-wave ecocritics and the best up-and-coming scholars. Topics covered include Green Shakespeare, the Bard's subversive uses of the pastoral, John Clare's sacred relationship with the land, Thoreau's profound political passion, the natural landscape as symbol of postcolonial resistance in works by Lessing Naipaul and Coetzee, the relation between feminism and environmentalism, language and the concept of biosemiotics, and concerns over pollution and toxicity in films like *Erin Brockovich*, *Michael Clayton* and *Al Gore's An Inconvenient Truth*. **The Art of Fluid Animation** Jos Stam, 2015-11-04. This book presents techniques for creating fluid-like animations with no required advanced physics and mathematical skills. It describes how to create fluid animations like water, smoke, fire and explosions through computer code in a fun manner. It includes a historical background of the computation of fluids as well as concepts that drive fluid animations and also provides computer code that readers can download and run on several platforms to create their own programs using fluid animation.

Deep-sea Biodiversity Michael A. Rex, Ron J. Etter, 2010. Rex and Etter present the first synthesis of patterns and causes of biodiversity in organisms that dwell in the vast sediment ecosystem of ocean floor. They offer a new understanding of marine biodiversity that will be of general interest to ecologists and is crucial to responsible exploitation of natural resources at the deep sea floor. **The Book of Barely Imagined Beings** Caspar Henderson, 2022-12-22.
