

ELECTRIC ACOUSTIC GUITAR

Owner's Manual

Thank you for choosing a Yamaha electric-acoustic guitar. In order to make the most of the advanced features and performance provided by your guitar, please read this manual carefully before using the instrument.

PRECAUTIONS

- The output jack is an EIAJ-standard 1/4" phone jack. Be sure to use an appropriate connection cable.
- The built-in preamplifier is automatically turned on when a plug is inserted into the output jack. When not using the instrument, or when playing it without amplification, be sure to remove the plug from the output jack so that the preamplifier power is cut off.
- Always set the VOLUME control to "0" when plugging in or unplugging the connection cable.
- The battery check indicator (BATE) will light briefly when a plug is inserted or removed from the output jack. This is normal and does not indicate a malfunction.
- Be sure to remove the battery if the instrument will not be used for an extended period of time in order to prevent possible damage due to battery leakage.

BATTERY REPLACEMENT

Be sure to replace the battery as soon as possible when the battery check indicator lights in order to avoid reduced sound quality.

- Be sure to remove the battery if the instrument will not be used for an extended period of time in order to prevent possible damage due to battery leakage.

- Press the catch on the battery holder in the direction indicated by the arrow to slide the battery cover out.

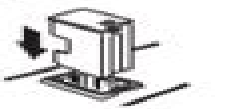

- Slide out the battery cover.

- Remove the old battery from the battery cover, and insert the new battery making sure that the (+) and (-) terminals of the battery are positioned as shown in the illustration. Use only a 6LR6 (9V) or equivalent battery.

- Slide the battery cover back into the battery holder and press. Verify that the battery cover locks into place.

NOMENCLATURE

THE CONTROLS

- VOL. (Volume) Control**
Adjusts the overall output volume level.
* When using other than 100% (as marked on "0") before connecting or disconnecting.
- BATE (Battery Check) Indicator**
When battery power is low, this indicator will light. As battery power becomes further depleted, the red color will intensify. Please replace the battery with a fresh one as soon as possible.
- Equalizer Controls for the Bar Sensor (Piano)**
LOW : Controls the level of the low frequencies.
MID : Controls the level of the middle frequencies. The AMP control ⑤ adjusts the control frequency of the band affected by this control.
HIGH : Controls the level of the high frequencies.
- AMP Control**
Sets the center frequency of the band of frequencies affected by the MID equalizer control. This range is from 80Hz to 6 kHz.
* This control does not affect the bar sensor control when it is set to "0" position.
- MIC. VOL.**
Control the volume of the condenser mic. that is located inside the body (on the back of the preampifier).
* Setting this volume to 0 will result in a soft sound without causing damage to your sound system. (On the 4th case, the bar sensor MIC. VOL. control and the 4th case will be used.)
- MIC. TONE**
Adjusts the tone quality of the condenser mic. Rotate the knob to the LOW side to increase emphasis on low frequencies or to the HIGH side to increase emphasis on high frequencies.
- PHASE switch for the MIC.**
Using this switch will change the tone whenever the mic. signal is added to the guitar's tone. It can be effectively used to control feedback depending upon the device that are used on stage settings. Use it as you like.

USING THE SOUND HOLE COVER

Feedback often occurs when controls are located on the electric-acoustic guitar to match the volume of the instrument when playing in silence. Another source of feedback results from using the MIC. VOL. controls to increase the output from the internal condenser mic.

When the instrument is used under the conditions described above, the Sound Hole Cover (Accessory) inserted into the sound hole.

With the Sound Hole Cover in place, feedback is effectively reduced.

CONDENSER MIC. ADJUSTMENT

The condenser mic. is attached inside the body (on the back of the preampifier) with a flexible peg that allows free adjustment of the mic's direction. A variety of tone variations are achievable by changing the direction of the mic's head.

- When the guitar was shipped from the factory, the mic's head is positioned so that the body slightly points to towards the sound hole and about 10mm from the guitar's top. (You can see it from the sound hole.) This setting is good for picking up the sound of the strings being played. (See diagram 1.)
- When the mic's head is slightly pointing toward the inside of the body this setting will pick up a stronger body sound. (See diagram 2.)
