

Continued space travel and exploration are essential for humans in order to expand our understanding of the universe. One of the biggest questions we have is if there are other living beings out there. We also want to know whether or not there are any valuable resources that we can use on earth. Finally, as the earth becomes more and more crowded, people wonder if there is a planet that humans can live on. Of course there are many costs, dangers and rewards associated with exploring these three ideas further.

Aliens and extra-terrestrial beings occupy the imaginations of millions of people. Think of how many books, movies and songs are about creatures from outer space. As soon as man stepped foot on the moon - the question about life on other planets continued to dominate space research and exploration. The technology required to observe, record, and test the atmosphere and composition of the planets is very costly. It is expensive to design tools to withstand extreme temperatures and unknown materials. Also as science advances and new things are discovered, new tools need to be created in order to find out more. Many satellites and probes are used to determine if there is movement or living things on other planets. These tools only measure what we currently know to measure. Scientists are working hard to evolve the satellites and probes so that we can measure and learn more. The dangers of finding out about life on other planets is that sometimes valuable equipment is lost or worse, human lives are lost as some space crafts do not make it out of the earth's atmosphere or back into it after a mission is completed. But when there are discoveries made the rewards are huge for the astronauts and the scientists as they become famous and make lots of money because of their bravery or brilliance.

Humans use a lot of the earth's resources. Some are renewable and some are non-renewable. Consumption is a huge concern and so some people focus on using renewable resources and recycling what we do have and others look to finding new sources of energy. One of the places that scientists are exploring for resources is space. As far as we know, since nobody lives in space, no one owns space including the land, the air or the resources. Therefore, if someone was to discover something useful and a way to mine it and transport it back to earth, they could do that. While that would be extremely expensive to research, it could be very profitable in the end. However, there may also be many dangers such as losing new equipment and technology while trying to find out what works, or losing lives when people are exploring or having the resource be toxic and harmful to humans once it's in earth's atmosphere. If the resource was helpful to humans the rewards would be fame, money and a good feeling of knowing you have helped to do some good for people or the planet earth.

One of the most interesting ideas is living on another planet besides earth or even living in space on a big space ship. Star Wars and Star Trek are just two of hundreds of movies and shows about living in space and have captured the imaginations of people. Nowadays when astronauts live in space it is on small space craft with not a lot of room or excitement. They spend a lot of time doing research and monitoring things. They must miss their families when they are away for a long time or get tired of the people they are stuck onboard with. We are a long ways from being able to live in space in a comfortable way with all of the amenities that we are used to. For people to actually live in space a lot of money will have to be invested in space craft or habitat structures on other planets that have oxygen supplies. This would also be quite dangerous and many people could have accidents or die if something were to go wrong with the habitat. The rewards for humans would be kind of like being a pioneer or the "first" true space residents. Also a chance for a new or different way of life.

Space travel and exploration will be a part of the human story for years to come. We won't know how long it will take before aliens are discovered, resources are mined and utilized on earth or if we will truly ever live in space. Money will continued to be invested in space and some lives will be lost, but the rewards and excitement will be worth it.

Students of Color and the Achievement Gap Richard R. Valencia,2015-03-05 Students of Color and the Achievement Gap is a comprehensive landmark analysis of an incontrovertible racialized reality in U S K 12 public education the relentless achievement gap between low socioeconomic students of color and their economically advantaged White counterparts Award winning author and scholar Richard Valencia provides an authoritative and systemic treatment of the achievement gap focusing on Black and Latino Latina students He examines the societal and educational factors that help to create and maintain the achievement gap by drawing from critical race theory an asset based perspective and a systemic inequality approach By showing how racialized opportunity structures in society and schools ultimately result in racialized patterns of academic achievement in schools Valencia shows how the various indicators of the achievement gap are actually symptoms of the societal and school quality gaps Following each of these concerns Valencia provides a number of reform suggestions that can lead to systemic transformations of K 12 education Students of Color and the Achievement Gap makes a persuasive and

well documented case that school success for students of color and the empowerment of their parents can only be fully understood and realized when contextualized within broader political economic and cultural frameworks Measurement and Assessment in Education Cecil R. Reynolds, Ronald B. Livingston, Victor L. Willson, 2006 This text employs a somewhat traditional approach to the study of educational tests and measurement so that teachers will understand essential psychometric concepts and be able to apply them in the classroom The principles that guide the development of this text are 1 What essential knowledge and skills do classroom teachers need to conduct student assessments in a professional manner and 2 What does the research on educational assessment tell us This focus has resulted in a uniquely approachable but technically accurate presentation of the material While providing a slightly more technical presentation of the material than more basic texts this text is both approachable and comprehensive The text includes a gentle introduction to the basic mathematics of measurement and expands traditional coverage to include a thorough discussion of performance and portfolio assessments a complete presentation of assessment accommodations for students with disabilities and a practical discussion of professional best practices in educational measurement **Chicano School Failure and Success** Richard R. Assessing Students in the Margin Michael Russell, Maureen Kavanaugh,2011-02-01 The importance of student assessment particularly for summative purposes has increased greatly over the past thirty years At the same time emphasis on including all students in assessment programs has also increased Assessment programs whether they are large scale district based or teacher developed have traditionally attempted to assess students using a single instrument administered to students under the same conditions Educators and test developers however are increasingly acknowledging that this practice does not result in valid information inferences and decisions for all students This problem is particularly true for students in the margins whose characteristics and needs differ from what the public thinks of as the general population of students Increasingly educators educational leaders and test developers are seeking strategies techniques policies and guidelines for assessing students for whom standard assessment instruments do not function well Whether used for high stakes decisions or classroom based formative decisions the most critical element of any educational assessment is validity Developing and administering assessment instruments that provide valid measures and allow for valid inferences and decisions for all groups of students presents a major challenge for today s assessment programs Over the past few decades several national policies

have sparked research and development efforts that aim to increase test validity for students in the margins This book explores recent developments and efforts in three important areas The first section focuses on strategies for improving test validity through the provision of test accommodations The second section focuses on alternate and modified assessments Federal policies now allow testing programs to develop and administer alternate assessments for students who have not been exposed to grade level content and thus are not expected to demonstrate proficiency on grade level assessments A separate policy allows testing programs to develop modified assessments that will provided more useful information about achievement for a small percentage of students who are exposed to grade level content but for whom the standard form of the grade level test does not provide a valid measure of achievement These policies are complex and can be confusing for educators who are not familiar with their details The chapters in the second section unpack these policies and explore the implications these policies have for test design The third and final section of the book examines how principles of Universal Design can be applied to improve test validity for all students Collectively this volume presents a comprehensive examination of the several issues that present challenges for assessing the achievement of all students While our understanding of how to overcome these challenges continues to evolve the lessons strategies and avenues for future research explored in this book empower educators test developers and testing programs with a deeper understanding of how we can improve assessments for students in the margins

Wise Social Studies in an Age of High-Stakes Testing Elizabeth Anne Yeager, O. L. Davis, 2005-08-01 The chapters in this volume illustrate how teachers are bringing creativity higher order thinking and meaningful learning activities into particular school settings despite pressures of standards and testing We chose the word wise for the title of this book and we use it frequently to describe the pedagogical practices we have identified The words powerful and ambitious are used as well The larger point as Keith C Barton makes in his chapter is that there is no necessary connection between content standards and high stakes tests on the one hand and lowlevel rote instruction on the other He reminds us as Thornton 1991 and Wiggins 1987 previously have argued that teachers play a crucial role in mediating educational policy and their intentions and interpretations have at least as much influence on classroom practice as does the content of standards and highstakes tests Barton also asserts that this makes it all the more crucial to identify the wisdom of practice that enables teachers to engage students in powerful educational experiences
