Simple Version / No Manual Switches

The fan remains off until the temp probe reaches the desired temp triggering the first relay to automatically engage the fan's low speed. When the air conditioning is turned on the second relay automatically switches from low speed to high speed. When on high speed the current is cut off from the low speed circuit. Because the Taurus fan is known to spike at 80A+ at start up when on high, 75A relays should be used. Normal current draw on high is usually around 34A.
