Politics and Climate Change: A History Andy May, 2022-09-04 These are stories of the political corruption of science Politicians work to forge a consensus they use persuasion intimidation and avoid or suppress debate Debating an issue leads to education it shows the question is more complex than it appears it makes the public consider all sides Education leads to caution not action The politician wants a decision he wants action so no debate Once the consensus is formed the public votes laws are passed regulations issued the minority concedes and conflict is avoided Science is not a belief It exists to challenge the consensus view It is how one person can show the overwhelming majority is mistaken Scientists do not vote they debate They gather facts make observations and analyze the data and try to show the consensus opinion is wrong Politicians and scientists don't mix They are like fire and water opposites But what about when no one trusts the politician and he must have a scientist for back up What happens when the government becomes the sole source of research money We address the attempt by politicians to control scientific research and research outcomes They do this by selectively funding projects that look for potential disasters ideally global disasters People love disaster stories journalists love disaster stories scientists love to be quoted in newspapers and on television If you frighten people enough they will give up their rights for security increasing government power So it is not surprising that as

government has taken over funding scientific research scientists have migrated from research that helps people to researching possible catastrophes no matter how remote the possibility Science has devolved from improving human lives to developing plots for disaster movies

Carbon Politics and the Failure of the Kyoto Protocol

Gerald Kutney,2014-02-03 Carbon Politics and the Failure of Kyoto charts the framework and political evolution of the Kyoto Protocol negotiations and examines the ensuing failure of the international community to adequately address climate change The focus is not on the science or consequences of climate change but on the political gamesmanship of the major players throughout the UNFCCC negotiation process More than an updated history of the subject matter this book provides a detailed study of the carbon targets which became the biggest influencing factor on the reaction of nations to Kyoto s binding agreements The book provides an in depth analysis of the leading nations motives including the US China and Germany in entering the negotiations in particular their economic interests Despite the effort to combat climate change in politics that the negotiations represent the book concludes that an agreement which requires almost 200 very different nations to agree on a single protocol is doomed to failure The book offers a novel contribution to our understanding of this failure and suggests alternative frameworks and policies to tackle what is arguably the most complex political issue of our time

Environmental Pricing Larry Kreiser,Mikael Skou Andersen,Birgitte Egelund Olsen,Stefan Speck,Janet E. Carbon Capture Howard J. Herzog,2018-09-11 A

concise overview of carbon dioxide capture and storage CCS a promising but overlooked climate change mitigation pathway The burning of fossil fuels releases carbon dioxide CO₂ and these CO₂ emissions are a major driver of climate change Carbon capture offers a path to climate change mitigation that has received relatively little attention In this volume in the MIT Press Essential Knowledge series Howard Herzog offers a concise guide to carbon capture covering basic information as well as the larger context of climate technology and policy Carbon capture or carbon dioxide capture and storage CCS refers to a

suite of technologies that reduce CO2 emissions by capturing CO2 before it is released into the atmosphere and then transporting it to where it will be stored or used. It is the only climate change mitigation technique that deals directly with fossil fuels rather than providing alternatives to them. Herzog, a pioneer in carbon capture research, begins by discussing the fundamentals of climate change and how carbon capture can be one of the solutions. He explains capture and storage technologies including chemical scrubbing and the injection of CO2 deep underground. He reports on current efforts to deploy CCS at factories and power plants and attempts to capture CO2 from the air itself. Finally, he explores the policies and politics in play around CCS and argues for elevating carbon capture in the policy agenda.

A People's Curriculum for the Earth Bill Bigelow, Tim Swinehart, 2014-11-14. *A People's Curriculum for the Earth* is a collection of articles, role plays, simulations, stories, poems, and graphics to help breathe life into teaching about the environmental crisis. The book features some of the best articles from *Rethinking Schools* magazine alongside classroom-friendly readings on climate change, energy, water, food, and pollution, as well as on people who are working to make things better. *A People's Curriculum for the Earth* has the breadth and depth of *Rethinking Globalization*, *Teaching for Justice in an Unjust World*, one of the most popular books we've published. At a time when it's becoming increasingly obvious that life on Earth is at risk, here is a resource that helps students see what's wrong and imagine solutions. Praise for *A People's Curriculum for the Earth*: To really confront the climate crisis, we need to think differently, build differently, and teach differently. *A People's Curriculum for the Earth* is an educator's toolkit for our times. Naomi Klein, author of *The Shock Doctrine* and *This Changes Everything: Capitalism vs. the Climate*. This volume is a marvelous example of justice in ALL facets of our lives: civil, social, educational, economic, and yes, environmental. Bravo to the *Rethinking Schools* team for pulling this collection together and making us think more holistically about what we mean when we talk about justice. Gloria Ladson Billings, Kellner Family Chair in Urban Education, University of Wisconsin-Madison. Bigelow and Swinehart have created a critical resource for today's young people about humanity's responsibility for the Earth. This book can engender the shift in perspective so needed at this point on the clock of the universe. Gregory Smith, Professor of Education, Lewis Clark College, co-author with David Sobel of *Place and Community-based Education in Schools*.

Big Mind Geoff Mulgan, 2019-11-12. A new field of collective intelligence has emerged in the last few years, prompted by a wave of digital technologies that make it possible for organizations and societies to think at large scale. This bigger mind, human and machine capabilities working together, has the potential to solve the great challenges of our time. So why do smart technologies not automatically lead to smart results? Gathering insights from diverse fields including philosophy, computer science, and biology, *Big Mind* reveals how collective intelligence can guide corporations, governments, universities, and societies to make the most of human brains and digital technologies.
