Unifying Biology Vassiliki Betty Smocovitis, 1996-12 Unifying Biology offers a historical reconstruction of one of the most important yet elusive episodes in the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than seventy years after Darwin proposed his theory of evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history

Empire of Knowledge Alexander Vucinich, 2023-11-15 Empire of Knowledge The Academy of

Sciences of the USSR 1917-1970 explores the unparalleled scope and influence of the Soviet Academy of Sciences an institution that served as both the pinnacle of Soviet scholarly achievement and a crucial mechanism for integrating science with state ideology. Spanning its origins in 1917 to its role in the post-Stalinist era, the book delves into the Academy's evolution amidst dramatic political, social, and technological changes. By 1970, the Academy encompassed 240 research bodies, employed over 35,000 individuals, and played a pivotal role in shaping Soviet science policy. The study highlights its dual identity as a government agency driving the integration of Marxist ideology into scientific exploration and as a microcosm of the global scientific community striving to maintain intellectual autonomy and uphold the universal ethos of science. This comprehensive account examines the Academy's institutional dynamics, including its pivotal role in the decentralization of research, its response to Stalinist policies, and the subsequent efforts to reconcile science with political authority. The narrative illuminates the tension between the state's ideological demands and the scientific community's commitment to intellectual freedom. By investigating the Academy's historical trajectory, the book offers insights into the broader relationship between knowledge production, political authority, and cultural values. Readers will find a nuanced exploration of how an institution can simultaneously foster groundbreaking scientific innovation and serve as a tool for ideological conformity, revealing the intricate interplay of science, politics, and society in the Soviet Union. Amiji,2021-12-27 We have surpassed the omics era and are truly in the Age of Molecular Therapeutics The fast paced development of SARS CoV 2 vaccines such as the mRNA vaccines encoding the viral spike protein demonstrated the need for and capability of molecular therapy and nanotechnology based solutions for drug delivery In record speed the SARS CoV 2 viral RNA genome was sequenced and shared with the scientific community allowing the rapid design of molecular therapeutics The mRNA vaccines exploit the host cell endoplasmic reticulum to produce viral spike proteins for antigen presentation and recognition by the innate and adaptive immune system Lipid nanoparticles enable the delivery of the fragile degradation sensitive nucleic acid payloads Molecular based therapeutics and nanotechnology solutions continue to drive the scientific and medical response to the COVID 19 pandemic as new mRNA DNA and protein based vaccines are developed and approved and the emergency use approved vaccines are rapidly manufactured and distributed throughout the globe The need for molecular therapies and drug delivery solutions is clear and as these therapies progress and become more specialized there will be important advancements in organelle targeting For example using organelle targeting to direct lipid nanoparticles with mRNA payloads to the endoplasmic reticulum would increase the efficacy of mRNA vaccines reducing the required dose and therefore the biomanufacturing demand Likewise improving the delivery of DNA therapeutics to the nucleus would improve efficacy Organelles and molecules have always been drug targets but until recently we have not had the tools or capability to design and develop such highly specific therapeutics Organelle targeting has far reaching implications For example mitochondria are central to both energy production and intrinsic apoptosis Effectively targeting and manipulating mitochondria has therapeutic applications for diseases such as myopathies cancer neurodegeneration progerias diabetes and the natural aging process The SARS CoV 2 vaccines that exploit the endoplasmic reticulum for mRNA vaccines and the nucleic translational process DNA vaccines attest to the need for organelle and molecular therapeutics This book covers the status demand and future of organelle and molecularly targeted therapeutics that are critical to the advancement of modern medicine Organelle and molecular targeting is the drug design and drug delivery approach of today and the future understanding this approach is essential for students scientists and clinicians contributing to modern medicine *The Science and Business of Drug Discovery* Edward D. Zanders,2011-07-08 The Science and Business of Drug Discovery is written for those who want to learn about the biopharmaceutical industry and its products whatever their level of technical knowledge Its aim is to demystify the jargon used in drug development but in a way that avoids over simplification and the resulting loss of key information Each of the nineteen chapters is illustrated with figures and tables which clarify some of the more technical points being made Also included is a drug discovery case history which draws the relevant material together into a single chapter In recognizing that

it is difficult to navigate through the many external resources dealing with drug development the book has been written to guide the reader towards the most appropriate information sources including those listed in the two appendices The following topics are covered Different types of drugs from small molecules to stem cells Background to chemistry of small and large molecules Historical background to drug discovery pharmacology and biotechnology The drug discovery pipeline from target discovery to marketed medicine Commercial aspects of drug discovery Challenges to the biopharmaceutical industry and its responses Material of specific interest to technology transfer executives recruiters and pharmaceutical translators

American Book Publishing Record Cumulative, 1950-1977: Title index R.R. Bowker Company. Department of Bibliography,1978 **Metaromanticism** Paul Hamilton,2003-07-15 This bracing study redefines romanticism in terms of its philosophical habits of self consciousness According to Paul Hamilton metaromanticism or the ways in which writers of the romantic period generalized their own practices was fundamentally characteristic of the romantic project itself Through a close look at the aesthetics of Friedrich Schiller and Jean Jacques Rousseau and key works by Samuel Taylor Coleridge Percy and Mary Shelley John Keats Sir Walter Scott Jane Austen and many others Hamilton shows how the romantic movement's struggle with its own tenets was not an effort to seek an alternative way of thought but instead a way of becoming what it already was And yet as he reveals the romanticists were still not content with their own self consciousness Pushed to the limit such contemplation either manifested itself as self disgust or found aesthetic ideas regenerated in discourses outside of aesthetics altogether
