Phillips, 2012-03-29 Bringing together scholars from a diverse range of disciplines *The City as Target* provides a sustained and critical response to the relationship between the concept of targeting in its many forms and notions of understanding imagining and shaping the urban Among the many spatial and graphic terms used to describe cities in urban studies the word target is rarely encountered Though equally spatial it differs from these others by implying some motive force and more than that a force with some intentionality To target is to aim to project and ultimately to impact It suggests a space of violence or at least action or movement resulting in displacement which most other terms do not In that sense it is useful underused and perhaps revelatory Rather than approach the city as simply a site of growth processes and developments the contributors to this volume treat it as the recipient of attentions The work draws on a wide variety of geographical sites and historic monuments in order to explore this concept examining and challenging current urban theories It seeks to highlight both the power of The Global City and the current vulnerability and fragility of urban culture exploring the city as a recipient and a culprit in relation to issues including terrorism and urban warfare the latest cyclical failure of global financial markets and the relatively new spectre of environmental unsustainability Offering a unique and relevant contribution to the literature this work will be of great interest to scholars of urban theory international relations postcolonial politics and military studies

Terrorists' Target Selection C. Drake, 1998-08-26 The author examines the factors which influence terrorists target selection In particular he looks at the influence of the ideologies strategies and tactics of terrorist groups and describes how these are restricted by the terrorists resources by protective and anti terrorist measures by the society within which the terrorists operate and by the nature of the terrorists and their supporters He concludes that terrorists target selection is often both explicable and logical **Ethics, Law and Justifying Targeted Killings** Jack McDonald, 2016-08-05 This book examines the normative debates around the American use of targeted killings It questions whether the Obama administration s defence of its use of targeted killings is cohesive or hypocritical In doing so the book departs from the disciplinary purpose of international law constitutional law and the just war tradition and instead examines discipline specific defences of targeted killings to identify their requisite normative principles in order to compare these norms across disciplines The methodology used in this book means that it argues that targeted killings are only defensible as acts of war but it also highlights the

normative role of accountability and responsibility in this defence In doing so it offers an argument that the use of pattern of life killings by the CIA falls outside the defence offered by the Obama administration but that this same type of targeting could be used by the military due to differing standards mechanisms of responsibility assignment in these organisations The book thus provides a way of investigating contemporary wars where the conduct of war lacks the traditional hallmarks of conventional warfare Furthermore by drawing attention to differing normative concepts that underpin competing interpretations of law and morality it provides a way of analysing contemporary political violence in an interdisciplinary fashion without seeking to displace single disciplinary study This book will be of much interest to students of military studies ethics of war foreign policy international security and IR
