Pulley Exercises

Hang your pulleys over a door and face the door. Use the good arm to raise the operated upon arm as high as you are able. Let the arm return to the side and then repeat, raising as high as you are able with each repetition. Once you can fully raise the arm while facing the door, turn around and repeat the process facing away from the door.

Wall Climbs

Stand facing a wall about 2-3 feet away from the wall. Use your fingers to help walk the hand up the wall, increasing shoulder elevation. Gently move forward to create a light stretching sensation. Light pain is OK.

Jacksons Exercise

Begin lying down on your back. Raise the surgical arm while keeping the elbow straight, using the good arm to help. Keep raising the arm you get a gentle stretch. Repeat. Once this is easier work towards performing the exercise without any help from the good arm.

External Rotation Exercise

Stand in a doorway facing the doorframe with your hand hooked around the doorframe. Slowly turn your body until you are parallel to the doorframe.

Shoulder Arthroplasty Louis U. Bigliani, Evan L. Flatow, 2005-11-18. The indications and use of shoulder arthroplasty has dramatically increased over the last decade and this trend will continue in the future. The average age of our population is increasing yet there is a strong desire to remain active and viable. Our knowledge of disease processes has broadened and improved our understanding about how best to manage these problems clinically. Technology and innovation have provided us with options that were not possible before. However a successful shoulder arthroplasty depends not only on knowledge and modern technology but also on sound clinical judgment, accurate surgical technique and appropriate postoperative rehabilitation. Detailed information concerning preoperative evaluation, approaches, technology, surgical technique and postoperative therapy will allow the surgeon to make decisions that will help his patient remain active.
