Spatial Econometrics Using Microdata Jean Dubé, Diègo Legros, 2014 Spatial Econometrics using Microdata Jean Dubé, Diègo Legros, 2014-11-10 This book provides an introduction to spatial analyses concerning disaggregated or micro spatial data Particular emphasis is put on spatial data compilation and the structuring of the connections between the observations Descriptive analysis methods of spatial data are presented in order to identify and measure the spatial global and local dependency The authors then focus on autoregressive spatial models to control the problem of spatial dependency between the residues of a basic linear statistical model thereby contravening one of the basic hypotheses of the ordinary least squares approach This book is a popularized reference for students looking to work with spatialized data but who do not have the advanced statistical theoretical basics Spatial Analysis Methods and Practice George Grekousis, 2020-06-11 This is an introductory textbook on spatial analysis and spatial statistics through GIS Each chapter presents methods and metrics explains how to interpret results and provides worked examples Topics include describing and mapping data through exploratory spatial data analysis analyzing geographic distributions and point patterns spatial autocorrelation spatial clustering geographically weighted regression and OLS regression and spatial econometrics The worked examples link theory to practice through a single real world case study with software and illustrated guidance Exercises are solved twice first through ArcGIS and then GeoDa Through a simple methodological framework the book describes the dataset explores spatial relations and associations and builds models Results are critically interpreted and the advantages and pitfalls of using various spatial analysis methods are discussed This is a valuable resource for graduate students and researchers analyzing geospatial data through a spatial analysis lens including those using GIS in the environmental sciences geography and social sciences **Spatial Econometric Methods in Agricultural Economics Using R** Paolo Postiglione, Roberto Benedetti, Federica Piersimoni, 2021-12-22 Modern tools such as GIS and remote sensing are increasingly used in the monitoring of agricultural resources The developments in GIS technology offer growing opportunities to agricultural economics analysts dealing with large and detailed spatial databases allowing them to combine spatial information from different sources and to produce different models The availability of these valuable sources of information makes the advanced models suggested in the spatial statistic and econometric literature applicable to agricultural economics This book aims at supporting stakeholders to design spatial surveys for agricultural data and or to analyse the geographically collected data This book attempts to describe the main typology of agricultural data and the most appropriate methods for the analysis together with a detailed description of the available data sources and their collection methods Topics such as spatial interpolation point patterns spatial autocorrelation survey data analysis small area estimation regional data modelling and spatial econometrics techniques are covered jointly with issues arising from the integration of several data types The theory of spatial methods is complemented by real and or simulated examples implemented through the open source software R

Advances in Spatial Econometrics Luc Anselin, Raymond Florax, Sergio J. Rey, 2004-08-12 World renowned experts in spatial statistics and spatial econometrics present the latest advances in specification and estimation of spatial econometric models This includes information on the development of tools and software and various applications The text introduces new tests and estimators for spatial regression models including discrete choice and simultaneous equation models The performance of techniques is demonstrated through simulation results and a wide array of applications related to economic growth international trade knowledge externalities population employment dynamics urban crime land use and environmental issues An exciting new text for academics with a theoretical interest in spatial statistics and econometrics and for practitioners looking for modern and up to date techniques

Spatial Econometrics Giuseppe Arbia, 2006-06-08 In recent years the so called new economic geography and the issue of regional economic convergence have increasingly drawn the interest of economists to the empirical analysis of regional and spatial data However even if the methodology for econometric treatment of spatial data is well developed there does not exist a textbook theoretically grounded well motivated and easily accessible to economists who are not specialists Spatial econometric techniques receive little or no attention in the major econometric textbooks Very occasionally the standard econometric textbooks devote a few paragraphs to the subject but most of them simply ignore the subject On the other hand spatial econometric books such as Anselin 1988 or Anselin Florax and Rey 2004 provide comprehensive and exhaustive treatments of the topic but are not always easily accessible for people whose main degree is not in quantitative economics or statistics This book aims at bridging the gap between economic theory and spatial statistical methods It starts by strongly motivating the reader towards the problem with examples based on real data then provides a rigorous treatment founded on stochastic fields theory of the basic spatial linear model and finally discusses the simpler cases of violation of the classical regression assumptions that occur when dealing with spatial data

Non-standard Spatial Statistics and Spatial Econometrics Daniel A. Griffith, Jean H. Paul Paelinck, 2011-01-11 Despite spatial statistics and spatial econometrics both being recent sprouts of the general tree spatial analysis with measurement some may remember the debate after WWII about theory without measurement versus measurement without theory several general themes have emerged in the pertaining literature But exploring selected other fields of possible interest is tantalizing and this is what the authors intend to report here hoping that they will suscitate interest in the methodologies exposed and possible further applications of these methodologies The authors hope that reactions about their publication will ensue and they would be grateful to readers motivated by some of the research efforts exposed hereafter letting them know about these experiences

P. Paelinck, Leo H. Klaassen, J. P. Ancot, A. C. P. Verster, Sij Wagenaar, 1979 **Spatial Econometrics** Giuseppe Arbia, Badi H. Baltagi, 2008-11-14 Spatial Econometrics is a rapidly evolving field born from the joint efforts of economists statisticians econometricians and regional scientists The book provides the reader with a broad view of the topic by including both methodological and application papers Indeed the application papers relate to a number of diverse scientific fields ranging from hedonic models of house pricing to demography from health care to regional economics from the analysis of R D spillovers to the study of retail market spatial characteristics Particular emphasis is given to regional economic applications of spatial econometrics methods with a number of contributions specifically focused on the spatial concentration of economic activities and agglomeration regional paths of economic growth regional convergence of income and productivity and the evolution of regional employment Most of the papers appearing in this book were solicited from the International Workshop on Spatial Econometrics and Statistics held in Rome Italy in 2006 *A Primer for Spatial Econometrics* G. Arbia, 2014-06-30 This book aims at meeting the growing demand in the field by introducing the basic spatial econometrics methodologies to a wide variety of researchers It provides a practical guide that illustrates the potential of spatial econometric modelling discusses problems and solutions and interprets empirical results *Spatial Analysis Using Big Data* Yoshiki Yamagata, Hajime Seya, 2019-11-03 Spatial Analysis Using Big Data Methods and Urban Applications helps readers understand the most powerful state of the art spatial econometric methods focusing particularly on urban research problems

The methods represent a cluster of potentially transformational socio economic modeling tools that allow researchers to capture real time and high resolution information to potentially reveal new socioeconomic dynamics within urban populations Each method written by leading exponents of the discipline uses real time urban big data to solve research problems in spatial science Urban applications of these methods are provided in unsurpassed depth with chapters on surface temperature mapping view value analysis community clustering and spatial social networks among many others Reviews some of the most powerful and challenging modern methods to study big data problems in spatial science Provides computer codes written in R MATLAB and Python to help implement methods Applies these methods to common problems observed in urban and regional economics Spatial Econometrics Jean H. Econometrics: Methods and Models L. Anselin, 2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis

Handbook of Applied Spatial Analysis Manfred M. Fischer, Arthur Getis, 2009-12-24 The Handbook is written for academics researchers practitioners and advanced graduate students It has been designed to be read by those new or starting out in the field of spatial analysis as well as by those who are already familiar with the field The chapters have been written in such a way that readers who are new to the field will gain important overview and insight At the same time those readers who are already practitioners in the field will gain through the advanced and or updated tools and new materials and state of the art developments included This volume provides an accounting of the diversity of current and emergent approaches not available elsewhere despite the many excellent journals and te books that exist Most of the chapters are original some few are reprints from the Journal of Geographical Systems Geographical Analysis The Review of Regional Studies and Letters of Spatial and Resource Sciences We let our contributors develop from their particular perspective and insights their own strategies for mapping the part of terrain for which they were responsible As the chapters were submitted we became the first consumers of the project we had initiated We gained from depth breadth and distinctiveness of our contributors insights and in particular the presence of links between them **Spatial Econometrics** Giuseppe

Arbia, 2016-08-31 Spatial econometrics can be defined in a narrow and in a broader sense In a narrow sense it refers to methods and techniques for the analysis of regression models using data observed within discrete portions of space such as countries or regions In a broader sense it is inclusive of the models and theoretical instruments of spatial statistics and spatial data analysis to analyze various economic effects such as externalities interactions spatial concentration and many others Indeed the reference methodology for spatial econometrics lies on the advances in spatial statistics where it is customary to distinguish between different typologies of data that can be encountered in empirical cases and that require different modelling strategies A first distinction is between continuous spatial data and data observed on a discrete space Continuous spatial data are very common in many scientific disciplines such as physics and environmental sciences but are still not currently considered in the spatial econometrics literature Discrete spatial data can take the form of points lines and polygons Point data refer to the position of the single economic agent observed at an individual level Lines in space take the form of interactions between two spatial locations such as flows of goods individuals and information Finally data observed within polygons can take the form of predefined irregular portions of space usually administrative partitions such as countries regions or counties within one country *Morphisms for Quantitative Spatial Analysis* Daniel A. Griffith, Jean H. P. Paelinck, 2018-03-07 This book treats the notion of morphisms in spatial analysis paralleling these concepts in spatial statistics Part I and spatial econometrics Part II The principal concept is morphism e g isomorphisms homomorphisms and allomorphisms which is defined as a structure preserving the functional linkage between mathematical properties or operations in spatial statistics and spatial econometrics among other disciplines The purpose of this book is to present selected conceptions in both domains that are structurally the same even though their labelling and the notation for their elements may differ As the approaches presented here are applied to empirical materials in geography and economics the book will also be of interest to scholars of regional science quantitative geography and the geospatial sciences It is a follow up to the book *Non standard Spatial Statistics and Spatial Econometrics* by the same authors which was published by Springer in 2011 *Progress in Spatial Analysis* Antonio Páez, Julie Gallo, Ron N. Buliung, Sandy Dall'erba, 2009-10-30 Space is increasingly recognized as a legitimate factor that influences many processes and conceptual frameworks including notions of spatial coherence and spatial heterogeneity that have been demonstrated to provide substance to both theory and explanation The potential and relevance of spatial analysis is increasingly understood by an expanding sphere of cogent disciplines that have adopted the tools of spatial analysis This book brings together major new developments in spatial analysis techniques including spatial statistics econometrics and spatial visualization and applications to fields such as regional studies transportation and land use political and economic geography population and health Establishing connections to existing and emerging lines of research the book also serves as a survey of the field of spatial analysis and its links with related areas *Spatial Econometrics* L. Hordijk, Jean Paelinck, 1975
