1. Write an indirect proof.

Given: $\triangle ABC$ with $BC > AC$
Prove: $\angle A \cong \angle B$

Temporary Assumption: $\triangle ABC$ with $BC > AC$ and $\angle A \cong \angle B$.

Argument:

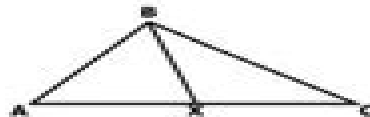

Since $\angle A \cong \angle B$, by the Converse of the Base Angles Theorem, $\overline{AC} \cong \overline{BC}$ and $AC = BC$ (definition of congruent segments). But it is given that $BC > AC$. $\rightarrow \leftarrow$

Therefore, in $\triangle ABC$, if $BC > AC$, $\angle A \not\cong \angle B$

2. Write an indirect proof.

Given: $\triangle ABC$ is scalene, $m\angle ABX = 36^\circ$,
 $m\angle CBX = 36^\circ$

Prove: $\overline{XB} \perp \overline{AC}$

Temporary Assumption: $\triangle ABC$ is scalene, $m\angle ABX = 36^\circ$,
 $m\angle CBX = 36^\circ$, $\overline{XB} \not\perp \overline{AC}$

Argument:

Since $\overline{XB} \not\perp \overline{AC}$, $\angle AXB$ and $\angle CXB$ are right angles by the definition of perpendicular segments. So, $\angle AXB \cong \angle CXB$ by the Right Angles Congruence Theorem. By the Reflexive Property of Congruence, $\overline{XB} \cong \overline{XB}$, so $\triangle ABX \cong \triangle CBX$ by ASA $\cong$. By CPCTC, $\overline{AB} \cong \overline{CB}$. Therefore, by the definition of isosceles triangle, $\triangle ABC$ is isosceles. But, it is given that $\triangle ABC$ is scalene. $\rightarrow \leftarrow$

Therefore, if $\triangle ABC$ is scalene, $m\angle ABX = 36^\circ$, $m\angle CBX = 36^\circ$,
then $\overline{XB} \perp \overline{AC}$

3. Perform the given construction.

- a. Construct the circle containing the three vertices

Construct the circumcenter (point of concurrency of the perpendicular bisectors of the sides of the triangle) then construct the circle through the 3 points.

- c. Construct the incenter of the triangle shown.

Construct the point of concurrency of the angle bisectors of the triangle.

- b. Construct an inscribed circle in the triangle

First construct the incenter (point of concurrency of the angle bisectors)
Next, from that center point, construct the perpendicular through that center to one of the sides in order to get the radius of the circle. Then construct the inscribed circle.

- d. Construct the orthocenter of the triangle shown.

Construct the point of concurrency of the altitudes of the triangle.

Katz, Karen Dee Michalowiz, 2020-03-02 Contains 11 modules consist of a number of activities designed to demonstrate the

use of the history of mathematics in the teaching of mathematics Objectives of the Modules To enable students to develop a much richer understanding of mathematics and its applications by viewing the same phenomena from multiple mathematical perspectives To enable students to understand the historical background and connections among historical ideas leading to the development of mathematics To enable students to see how mathematical concepts evolved over periods of time To provide students with opportunities to apply their knowledge of mathematics to various concrete situations and problems in a historical context To develop in students an appreciation of the history connected with the development of different mathematical concepts To enable students to recognize and use connections among mathematical ideas To enable students to understand how mathematical ideas interconnect and build on one another to produce a coherent whole To lead students to recognize and apply mathematics in contexts outside of mathematics Publisher *Axiomatic Geometry* John M. Lee, 2013-04-10 The story of geometry is the story of mathematics itself Euclidean geometry was the first branch of mathematics to be systematically studied and placed on a firm logical foundation and it is the prototype for the axiomatic method that lies at the foundation of modern mathematics It has been taught to students for more than two millennia as a mode of logical thought This book tells the story of how the axiomatic method has progressed from Euclid's time to ours as a way of understanding what mathematics is how we read and evaluate mathematical arguments and why mathematics has achieved the level of certainty it has It is designed primarily for advanced undergraduates who plan to teach secondary school geometry but it should also provide something of interest to anyone who wishes to understand geometry and the axiomatic method better It introduces a modern rigorous axiomatic treatment of Euclidean and to a lesser extent non Euclidean geometries offering students ample opportunities to practice reading and writing proofs while at the same time developing most of the concrete geometric relationships that secondary teachers will need to know in the classroom P 4 of cover *Geometry* Ron Larson, 1995 **Readings in Computer Vision** Martin A.
