

SPECTRONIC Standards 2 Kit

Introduction

The kit is intended to be used to verify a variety of performance attributes in your spectrophotometer.

- Neutral Density Glass standards are used to measure photometric accuracy, photometric repeatability and photometric linearity in a spectrophotometer.
- The wavelength (λ) standard is used to measure wavelength accuracy and repeatability
- The SRE filters are used to measure stray light performance of the instrument
- Any filter turned so that the metal sides are in the beam can be used to block the beam for a 0%T measurement

Note Always keep the standards in their case when not in use. Always keep the cover closed and latched. Never expose the standards to airborne contaminants like smoke, dust, oil vapor or chemical fumes. Visually inspect the photometric accuracy standards before each use. Remove any dust or lint by gentle brushing.

NOTICE Do not touch the surface of the glass in the standards. Fingerprints and scratches will affect the measured absorbance. If contamination or damage to the glass should occur, return the standards set to Thermo Fisher Scientific for recalibration. The recalibration process includes cleaning of the individual pieces of glass as part of the service. Damaged glass will be replaced for an additional charge.

Absorbance vs. Transmittance

Absorbance is calculated from transmittance using the formula $ABS = -\log(T)$ where T is the transmittance expressed as a decimal. For example, 50%T would convert to absorbance as

$$ABS = -\log_{10}(0.5) = 0.30$$

The calibration certificate supplied with the kit gives all photometric data expressed in both Transmittance and Absorbance.

Calibration and Traceability

Each standard in the set is uniquely identified. Calibrations are performed in a facility that meets ISO 17025 requirements and is accredited to perform the measurements. Note that the SRE filters are not standards and for this reason do not appear on the calibration certificate.

All photometric and wavelength measurements trace through Certified Reference Materials from NIST or through internationally recognized intrinsic standards.

Contents of the Kit

The SPECTRONIC[™] Standards 2 kit, Thermo Fisher Scientific[™] Part No. 840-253100, contains five standards and two glass filters secured in metal frames sized to match conventional 10 mm pathlength glass cuvettes. The kit contains the following:

- Four neutral density glass standards suitable for checking the photometric accuracy of a spectrophotometer at any of five wavelengths and up to an absorbance level of 1.5.
- One wavelength (λ) standard which is made from a multi-layer interference filter that presents three peaks in transmittance space. Measurements of this standard must be carried out in %T in order to recognize the peaks.¹

¹If you measure this standard in absorbance space you will see a jagged line at the maximum reading level for the spectrophotometer, or no line for much of the spectrum, with three valleys that are clearly discernible. If you see a spectrum that fits this description when measuring the wavelength standard, change the instrument to transmittance mode and re-scan the standard.
