Spiders Are Strange Enough:

The Spider (Cryptofiction Classics - Weird Tales of Strange Creatures) Hanns Heinz Ewers, 2015-02-17 This early work by Hans Heinz Ewers was originally published in 1915 and we are now republishing it as part of our Cryptofiction Classics series. The Spider is a short story of black magic based on The Mysterious Sketch by Erckmann Chatrian. The Cryptofiction Classics series contains a collection of wonderful stories from some of the greatest authors in the genre including Ambrose Bierce, Arthur Conan Doyle, Robert Louis Stevenson, and Jack London. From its roots in cryptozoology, this genre features bizarre, fantastical, and often terrifying tales of mythical and legendary creatures. Whether it be giant spiders, werewolves, lake monsters, or dinosaurs, the Cryptofiction Classics series offers a fantastic introduction to the world of weird creatures in fiction.

The Spider Catcher Gilbert Morris, 2009-05-26 He is a young Welshman who forsook the family shipbuilding business to study medicine until poised at the brink of a brilliant career, tragedy broke his heart and shattered his dreams. She is a daughter of London's inner city, a woman child weaned on life's harsh realities who has learned much about fending for her living and her virtue but little of what it means to be loved. Thrown together by circumstance, Rees Kenyon and Callie Summers head across the ocean toward a new life during the stormy beginnings of the American Revolution. As a new nation struggles for independence, Rees employs his medical knowledge to save lives and his shipbuilder's skills to build the potent fighting vessel known as the Spider Catcher. But it is Callie, whom Rees scooped from the mud of the London streets on whom his own life will soon depend and who can help him find for himself the faith, hope, and love he has taught her.

Spider Biology Rainer Foelix, 2025-09-15 This book is based on the well-established book *Biology of Spiders* but is completely updated. It focuses on the biology and natural history of spiders in general; it does not deal with the identification of spiders. Virtually all aspects of spider biology are covered, from anatomy and physiology to neurobiology and behavior, or from spider venom to prey capture and from silk production to complex web construction. The book will appeal not only to spider enthusiasts, professional arachnologists, and zoologists but to anyone with an interest in biology. It is written in a clear and straightforward style, making it easy to read for the general reader.
