The main objective of the project during the summer internship at CalPortland Company was creating Spill Prevention Control and Countermeasure SPCC Plan for the company s Colton aggregate plant The SPCC plan is required by 40 CFR Section 112 oil pollution prevention of the Environmental Protection agency in order to prevent the discharge of oil from non transportation related onshore and offshore facilities into or upon the navigable waters of the United States or adjoining shorelines ECFR code of federal regulations 2016 Previously CalPortland company s Colton plant operated as a cement plant until it was permanently shut down in the year of 2009 and many documents have been lost or misplaced ever since Since then the plant restarted operations but this time as an aggregates plant which still requires an SPCC plan since it stores and uses oil products that are in the amounts requiring current SPCC plan Thus as an environmental engineering intern I was assigned to study all of the rules and regulations set by environmental protection agency for the preparation and implementation of Spill Prevention Control and Countermeasure Plan which eventually became company s official plan after it was approved and signed by my internship mentor Licensed Engineer Desirea Haggard **Spill Prevention Guidance Document** Brian Quil,1998-10-01 This manual guides Navy areas in developing and implementing their Spill Prevention Control and Countermeasure plan SPCC Plan for oil and hazardous substances HS This document is required by the Environmental Protection Agency EPA Part 40 of the Code of Federal Regulation Section 112 20 CFR 112 the Oil Pollution Prevention regulation and OPNAVINST 5090 1B for oil area meeting the criteria in 40 CFR 112 Spill control measures are required for hazardous waste HW storage areas regulated by either 40 CFR 264 or 40 CFR 265 Additionally some spill control measures are required for underground storage tanks UST regulated by 40 CFR 280 HW storage areas not specifically regulated by the above referenced regulations do not have regulated spill control requirements however it is considered best engineering practice to have spill control measures at all HS storage areas Therefore it is recommended that all HS storage areas be included in Navy SPCC plans For overseas locations please refer to OEBGD FGS criteria for spill prevention guidance
