Unfortunately, the quality of available light and the situations in which photos are created are rarely perfect. This is especially true when photographing weddings or portraits on location. So while finding beautiful existing light is every photographer's ideal, it isn't always possible. This is the point at which photographers tend to reach for a portable on camera flash. Indeed, these intense light sources can prove invaluable, but only if you know how to use them effectively. In the hands of an inexperienced photographer, on camera flash will produce images that look flat and lifeless, images with harsh shadows, washed out skin tones, cavernous black backgrounds, and other unappealing visual characteristics. In this book, acclaimed

wedding and portrait photographer Neil van Niekerk shows you how to avoid the pitfalls photographers new to speedlights often encounter so that you can produce professional images using on camera flash You'll learn to use simple accessories to manipulate the quality of light from your flash and how to improve a lighting scenario by enhancing rather than overwhelming the existing light When the available light is too low and too uneven to be combined with flash he shows you how to override it completely with flash and with some thought and careful application of specialized techniques still get results that look great On camera flash is one of the most challenging light sources to master but with the techniques in this book you'll learn to use it with confidence For wedding and environmental portrait photographers who must work in ever changing lighting scenarios this can mean better images and better sales
