Titration Virtual Lab

The acid-base titration computer simulation to accompany this tutorial is located at URL:

http://group.chem.iastate.edu/Greenbowe/sections/projectfolder/flashfiles/stoichiometry/a_b_phtitr.html

For this tutorial you will complete a strong acid vs. strong base titration experiment online. As you proceed, watch the pH at various points during the titration. You need to do the calculations.

Procedure:

1. Enter the link above.
Or find the link on my 40S Chem page (mrstorie.wikispaces.com) entitled *Titration Virtual Lab*.
2. Select "Strong Acid vs. Strong Base."
3. Fill the burette with base.
4. Select **HNO₃** as the acid and **KOH** as the base.
The computer will automatically assign a molarity and a volume for the acid.

Record the molarity and volume (convert to litres) for the acid:

_____ M _____ L

5. Select the indicator phenolphthalein.
6. Click on graph. That is the expected graph of *pH* vs. *volume of base added*.

Make a *detailed* sketch of the graph below and label the *equivalence point* on the curve:

Mattock, 1961 *An On-line Acid-base Titration Applet in the Generic Tutorial System for the Sciences Project* Thomas Lee Gummo, 2002 The purpose of this Master's Project was to develop an Acid Base Titration Simulator It was also to be a part of the California State University San Bernardino's GTSS Generic Tutorial System for the Sciences project The main benefit is that students will be able to conduct titration experiments over the Internet without being in the laboratory and without costly equipment or dangerous chemicals Instructors at the high school and college level can demonstrate the key principles of titration Aqueous Acid-base Equilibria and Titrations Robert De Levie, 1999 This book will give students a thorough grounding in pH and associated equilibria material absolutely fundamental to the understanding of many aspects of chemistry It is in addition a fresh and modern approach to a topic all too often taught in an outmoded way This book uses new theoretical developments which have led to more generalized approaches to equilibrium problems these approaches are often simpler than the approximations which they replace Acid base problems are readily addressed in terms of the proton condition a convenient amalgam of the mass and charge constraints of the chemical system considered The graphical approach of Bjerrum Hagg and Sillen is used to illustrate the orders of magnitude of the concentrations of the various species involved in chemical equilibria Based on these concentrations the proton condition can usually be simplified often leading directly to the value of the pH In the description of acid base titrations a general master equation is developed It provides a continuous and complete description of the entire titration curve which can then be used for computer based comparison with experimental data Graphical estimates of the steepness of titration curves are also developed from which the practicality of a given titration can be anticipated Activity effects are described in detail including their effect on titration curves The discussion emphasizes the distinction between equilibrium constants and electrometric pH measurements which are subject to activity corrections and balance equations and spectroscopic pH measurements which are not Finally an entire
