Creating Life in the Lab Fazale Rana, 2011-02-01 Each year brings to light new scientific discoveries that have the power to either test our faith or

strengthen it most recently the news that scientists have created artificial life forms in the laboratory If humans can create life what does that mean for the creation story found in Scripture Biochemist and Christian apologist Fazale Rana for one isn't worried In *Creating Life in the Lab* he details the fascinating quest for synthetic life and argues convincingly that when scientists succeed in creating life in the lab they will unwittingly undermine the evolutionary explanation for the origin of life demonstrating instead that undirected chemical processes cannot produce a living entity

Principles of Molecular Biology Burton E. Tropp, 2012-12-14 Includes access to the Student Companion Website with every print copy of the text Written for the more concise course *Principles of Molecular Biology* is modeled after Burton Tropp's successful *Molecular Biology: Genes to Proteins* and is appropriate for the sophomore level course The author begins with an introduction to molecular biology discussing what it is and how it relates to applications in real life with examples pulled from medicine and industry An overview of protein structure and function follows and from there the text covers the various roles of technology in elucidating the central concepts of molecular biology from both a historical and contemporary perspective Tropp then delves into the heart of the book with chapters focused on chromosomes genetics replication DNA damage and repair recombination transposition transcription and wraps up with translation Key Features Presents molecular biology from a biochemical perspective utilizing model systems as they best describe the processes being discussed Special Topic boxes throughout focus on applications in medicine and technology Presents real world applications of molecular biology that are necessary for students continuing on to medical school or the biotech industry An end of chapter study guide includes questions for review and discussion Difficult or complicated concepts are called out in boxes to further explain and simplify

The Physics of Proteins Hans Frauenfelder, 2010-05-30 Provides an introduction to the structure and function of biomolecules especially proteins and the physical tools used to investigate them The discussion concentrates on physical tools and properties emphasizing techniques that are contributing to new developments and avoiding those that are already well established and whose results have already been exploited fully New tools appear regularly synchrotron radiation proton radiology holography optical tweezers and muon radiography for example have all been used to open new areas of understanding

Blueprint for a Cell Christian De Duve, 1991 In narrative form the author winner of the Nobel Prize delineates the blueprint of life the pattern of chemical events on which all life depends and demonstrates unity in the diversity of life on earth

Structural Insights Into Gene Expression And Protein Synthesis Thomas A. Steitz, 2020-08-18 Several years ago Thomas Steitz agreed to contribute a volume to the World Scientific Series in Structural Biology that would deal with the contributions he and his coworkers have made to structural biology during his remarkable career Sadly Tom died in the fall of 2018 before he had had time to do more than produce an outline for this book and a list of the reprints he wanted it to contain Fortunately Tom's colleagues and coworkers responded enthusiastically when they were informed later that fall that if they were willing to help out a volume would be published to commemorate his career It

fell to Anders Liljas Peggy Eatherton Tom s longtime administrative assistant and Peter Moore a close colleague to oversee their efforts Thomas Steitz is best known for the work he and his coworkers did to elucidate the biochemical basis of gene expression The structures of a large number of the macromolecules involved in transcription and translation emerged from his laboratory over the course of his career This book includes reprints of the most important papers he had published grouped according to the structures they relate to and commentaries written by the scientists who collaborated with him to solve each of them It thus summarizes the achievements of one of the most distinguished biochemists of the second half of the 20th century

Biomimetic Research for Architecture and Building Construction Jan Knippers,Klaus G. Nickel,Thomas Speck,2016-12-19 This book comprises a first survey of the Collaborative Research Center SFB TRR 141 Biological Design and Integrative Structures Analysis Simulation and Implementation in Architecture funded by the Deutsche Forschungsgemeinschaft since October 2014 The SFB TRR 141 provides a collaborative framework for architects and engineers from the University of Stuttgart biologists and physicists from the University of Freiburg and geoscientists and evolutionary biologists from the University of T bingen The programm is conceptualized as a dialogue between the disciplines and is based on the belief that that biomimetic research has the potential to lead everyone involved to new findings far beyond his individual reach During the last few decades computational methods have been introduced into all fields of science and technology In architecture they enable the geometric differentiation of building components and allow the fabrication of porous or fibre based materials with locally adjusted physical and chemical properties Recent developments in simulation technologies focus on multi scale models and the interplay of mechanical phenomena at various hierarchical levels In the natural sciences a multitude of quantitative methods covering diverse hierarchical levels have been introduced These advances in computational methods have opened a new era in biomimetics local differentiation at various scales the main feature of natural constructions can for the first time not only be analysed but to a certain extent also be transferred to building construction Computational methodologies enable the direct exchange of information between fields of science that until now have been widely separated As a result they lead to a new approach to biomimetic research which hopefully contributes to a more sustainable development in architecture and building construction
