An Introduction to Differentiable Manifolds and Riemannian Geometry, 1986-04-21 An Introduction to Differentiable Manifolds and Riemannian Geometry Birational Geometry, Kähler-Einstein Metrics and Degenerations

Ivan Cheltsov, Xiuxiong Chen, Ludmil Katzarkov, Jihun Park, 2023-05-23 This book collects the proceedings of a series of conferences dedicated to birational geometry of Fano varieties held in Moscow Shanghai and Pohang The conferences were focused on the following two related problems existence of Kähler Einstein metrics on Fano varieties degenerations of Fano varieties on which two famous conjectures were recently proved The first is the famous Borisov Alexeev Borisov Conjecture on the boundedness of Fano varieties proved by Caucher Birkar for which he was awarded the Fields medal in 2018 and the second one is the arguably even more famous Tian Yau Donaldson Conjecture on the existence of Kähler Einstein metrics on smooth Fano varieties and K stability which was proved by Xiuxiong Chen Sir Simon Donaldson and Song Sun The solutions for these longstanding conjectures have opened new directions in birational and Kähler geometries These research directions generated new interesting mathematical problems attracting the attention of mathematicians worldwide These conferences brought together top researchers in both fields birational geometry and complex geometry to solve some of these problems and understand the relations between them The result of this activity is collected in this book which contains contributions by sixty nine mathematicians who contributed forty three research and survey papers to this volume Many of them were participants of the Moscow Shanghai Pohang conferences while the others helped to expand the research breadth of the volume the diversity of their contributions reflects the vitality of modern Algebraic Geometry

Differential Geometry and Analysis on CR Manifolds Sorin Dragomir, Giuseppe Tomassini, 2007-06-10 Presents many major differential geometric achievements in the theory of CR manifolds for the first time in book form Explains how certain results from analysis are employed in CR geometry Many examples and explicitly worked out proofs of main geometric results in the first section of the book making it suitable as a graduate main course or seminar textbook Provides unproved statements and comments inspiring further study

Differentiable Manifolds Gerardo F. Torres del Castillo, 2011-10-09 This textbook delves into the theory behind differentiable manifolds while exploring various physics applications along the way Included throughout the book are a collection of exercises of varying degrees of difficulty Differentiable Manifolds is intended for graduate students and researchers interested in a theoretical physics approach to the subject Prerequisites include multivariable calculus linear algebra and differential equations and a basic knowledge of analytical mechanics

Differential Geometric Structures and Applications Vladimir Rovenski, Paweł Walczak, Robert Wolak, 2024-03-15 This proceedings contains a collection of selected peer reviewed contributions from the 4th International Workshop Differential Geometric Structures and Applications held in Haifa Israel from May 10 13 2023 The papers included in this volume showcase the latest advancements in modern geometry and interdisciplinary applications in fields ranging from mathematical physics to biology Since 2008 this

workshop series has provided a platform for researchers in pure and applied mathematics including students to engage in discussions and explore the frontiers of modern geometry Previous workshops in the series have focused on topics such as Reconstruction of Geometrical Objects Using Symbolic Computations 2008 Geometry and Symbolic Computations 2013 and Geometric Structures and Interdisciplinary Applications 2018 *Optimization Algorithms on Matrix Manifolds* P.-A. Absil, R. Mahony, Rodolphe Sepulchre, 2009-04-11 Many problems in the sciences and engineering can be rephrased as optimization problems on matrix search spaces endowed with a so called manifold structure This book shows how to exploit the special structure of such problems to develop efficient numerical algorithms It places careful emphasis on both the numerical formulation of the algorithm and its differential geometric abstraction illustrating how good algorithms draw equally from the insights of differential geometry optimization and numerical analysis Two more theoretical chapters provide readers with the background in differential geometry necessary to algorithmic development In the other chapters several well known optimization methods such as steepest descent and conjugate gradients are generalized to abstract manifolds The book provides a generic development of each of these methods building upon the material of the geometric chapters It then guides readers through the calculations that turn these geometrically formulated methods into concrete numerical algorithms The state of the art algorithms given as examples are competitive with the best existing algorithms for a selection of eigenspace problems in numerical linear algebra *Optimization Algorithms on Matrix Manifolds* offers techniques with broad applications in linear algebra signal processing data mining computer vision and statistical analysis It can serve as a graduate level textbook and will be of interest to applied mathematicians engineers and computer scientists **Bilinear Control Systems**

David Elliott, 2009-09-01 The mathematical theory of control became a field of study half a century ago in attempts to clarify and organize some challenging practical problems and the methods used to solve them It is known for the breadth of the mathematics it uses and its cross disciplinary vigor Its literature which can be found in [Section 93 of Mathematical Reviews](#) was at one time dominated by the theory of linear control systems which mathematically are described by linear differential equations forced by additive control inputs That theory led to well regarded numerical and symbolic computational packages for control analysis and design Nonlinear control problems are also important in these either the underlying dynamical system is nonlinear or the controls are applied in a non-additive way The last four decades have seen the development of theoretical work on nonlinear control problems based on differential manifold theory nonlinear analysis and several other mathematical disciplines Many of the problems that had been solved in linear control theory plus others that are new and distinctly nonlinear have been addressed some resulting general definitions and theorems are adapted in this book to the bilinear case

[Representation and Productive Ambiguity in Mathematics and the Sciences](#) Emily R. Grosholz, Emily Grosholz, 2007-08-30 Emily Grosholz offers an original investigation of demonstration in mathematics and science examining how it works and why it is persuasive Focusing on geometrical demonstration she shows the roles that representation and ambiguity play in

mathematical discovery She presents a wide range of case studies in mechanics topology algebra logic and chemistry from ancient Greece to the present day but focusing particularly on the seventeenth and twentieth centuries She argues that reductive methods are effective not because they diminish but because they multiply and juxtapose modes of representation Such problem solving is she argues best understood in terms of Leibnizian analysis the search for conditions of intelligibility Discovery and justification are then two aspects of one rational way of proceeding which produces the mathematician s formal experience Grosholz defends the importance of iconic as well as symbolic and indexical signs in mathematical representation and argues that pragmatic as well as syntactic and semantic considerations are indispensable for mathematical reasoning By taking a close look at the way results are presented on the page in mathematical and biological chemical and mechanical texts she shows that when two or more traditions combine in the service of problem solving notations and diagrams are subtly altered multiplied and juxtaposed and surrounded by prose in natural language which explains the novel combination Viewed this way the texts yield striking examples of language and notation that are irreducibly ambiguous and productive because they are ambiguous Grosholtz s arguments which invoke Descartes Locke Hume and Kant will be of considerable interest to philosophers and historians of mathematics and science and also have far reaching consequences for epistemology and philosophy of language
