Soul Of A New Machine:

The Soul of A New Machine Tracy Kidder, 2011-08-23 Tracy Kidder's riveting Washington Post story of one company's efforts to bring a new microcomputer to market won both the Pulitzer Prize and the National Book Award and has become essential reading for understanding the history of the American tech industry. Computers have changed since 1981 when *The Soul of a New Machine* first examined the culture of the computer revolution. What has not changed is the feverish pace of the high tech industry, the go-for-broke approach to business that has caused so many computer companies to win big or go belly up, and the cult of pursuing mind-bending technological innovations. *The Soul of a New Machine* is an essential chapter in the history of the machine that revolutionized the world in the twentieth century. Fascinating! A surprisingly gripping account of people at work. *Wall Street Journal*

Constructing Rhetorical Education Davida Charney, Wilma R. Ebbitt, 1992 In nineteen essays illustrating its many aspects this book offers an argument for what it takes to construct a complete rhetorical education The editors take an approach that is pragmatic and pluralistic based as it is on the assumptions that a rhetorical education is not limited to teaching freshman composition or any specific writing course and that the contexts in which such an education occurs are not limited to classrooms This thought provoking volume stresses that while a rhetorical education results in the growth of writing skills its larger goal is to foster critical thinking

Thomas, 1994-03-25 Thomas a faculty member at MIT urges managers not to put blind hopes into smarter machines but to find smarter ways to organize people Rather than recoil from the idea that technological change is political he argues theorists and practitioners alike should use political differences to inspire new uses for technology and more creative forms of industrial organization In an imaginative final chapter Thomas proposes an aesthetic of process for coordinating the aspirations of those who work in the factory the engineering lab and the corporate boardroom As U S companies battle for survival in an era of growing global competition What Machines Can't Do offers valuable insights into the ways we organize work Challenging conventional theories and provoking controversy in its call for change it is essential reading for anyone interested in the impact of technology on jobs and organizations and in the future of the industrial enterprise

Grier,2009-03-27 Based on author David A Grier's column In Our Time which runs monthly in Computer magazine Too Soon To Tell presents a collection of essays skillfully written about the computer age an era that began February 1946 Examining ideas that are both contemporary and timeless these chronological essays examine the revolutionary nature of the computer the relation between machines and human institutions and the connections between fathers and sons to provide general readers with a picture of a specific technology that attempted to rebuild human institutions in its own image **Capital, Class &&&&&&& Technology in Contemporary American Culture** Nick Heffernan,2000-12-20 In the tradition of Mike Davis and Fredric Jameson Nick Heffernan engages in a series of meditations on capital class and technology in contemporary America He turns to the stories we generate and tell ourselves via fiction film journalism theory to see how change is registered By investigating a variety of texts he observes how structural change affects the way people organise their lives economically socially and culturally Case studies include Ridley Scott's Blade Runner William Gibson's cyberspace trilogy Thomas Pynchon's The Crying of Lot 49 and Wim Wenders's Until the End of the World Using the links between narrative cultural forms and the process of historical understanding he brings together debates that have so far been conducted largely within the separate domains of political economy social theory and cultural criticism to provide a compelling analysis of contemporary cultural change By relocating postmodernism in the context of changing modes of capitalism Heffernan puts the question of class and class agency back at the centre of the critical agenda **README W.** Patrick McCray,2025-12-02 The essential role that the oldest literary technology books played in making computers popular and pervasive In README historian Patrick McCray argues that in order for computers to become ubiquitous people first had to become interested in them learn about them and take the machines seriously A powerful catalyst for this transformation was ironically one of the oldest information technologies we have books The author uses a carefully chosen selection of books some iconic and others obscure to describe this technological revolution as it unfolded in the half century after 1945 The book begins with a fundamental question How does a new technology become well known and widespread McCray answers this by using books as a window into significant moments in the history of computing books publishing and American culture

README offers a literary history of computers and more broadly information technologies between World War II and the dot com crash of the early twenty first century From the electronic brains and cybernetics craze of the 1940s to the birth of AI the rise of the personal computer and the Internet driven financial frenzy of the 1990s books have proven a durable and essential way for people to learn how to use and think about computers By offering a readable half century of bookish history README explains how computers became popular and pervasive **Oversold and Underused** Larry CUBAN,2009-06-30

Impelled by a demand for increasing American strength in the new global economy many educators public officials business leaders and parents argue that school computers and Internet access will improve academic learning and prepare students for an information based workplace But just how valid is this argument In Oversold and Underused one of the most respected voices in American education argues that when teachers are not given a say in how the technology might reshape schools computers are merely souped up typewriters and classrooms continue to run much as they did a generation ago In his studies of early childhood high school and university classrooms in Silicon Valley Larry Cuban found that students and teachers use the new technologies far less in the classroom than they do at home and that teachers who use computers for instruction do so infrequently and unimaginatively Cuban points out that historical and organizational economic contexts influence how teachers use technical innovations Computers can be useful when teachers sufficiently understand the technology themselves believe it will enhance learning and have the power to shape their own curricula But these conditions can t be met without a broader and deeper commitment to public education beyond preparing workers More attention Cuban says needs to be paid to the civic and social goals of schooling goals that make the question of how many computers are in classrooms trivial **Transformational Learning** Daniel R.
