Chapter 4

4-1 Required air velocities in pneumatic tubes can be estimated as:

$$V_m = V_s + V_f$$

Where: V_f = floating velocity (m/min);

$$V_f = 622 \sqrt{(SG)d}$$

d = aerodynamic diameter of the particles (centimeters)

W = the bulk density of the wood, $296 \frac{\text{kg}}{\text{m}^3}$

SG = the specific gravity of the wood chips, or

$$SG = 0.02(W)^{0.73} = 0.7$$

$$V_f = 622 \sqrt{(0.7)(2 \text{ cm})} = 736 \frac{\text{kg}}{\text{min}}$$

V_m = the material velocity sufficient to dislodge stuck particles and to even out the flow;

$$V_m = 44.6 \sqrt{W}$$

$$V_m = 44.6 \sqrt{296 \frac{\text{kg}}{\text{m}^3}} = 767 \frac{\text{m}}{\text{min}}$$

Solid Waste Engineering Solutions Manual:

Integrated Solid Waste Management George Tchobanoglous, 1993 Designed for undergraduate courses in civil or environmental engineering departments which take an engineering approach to solid waste management this is the solutions manual to a work which provides coverage of separation transformation and recycling of waste materials and offers a presentation of the integrated solid waste management system Spreadsheets are used to develop results for waste generation transportation recycling transformation and disposal *Assessment of engineering solutions for solid waste removal from irrigation canals in North Lebanon* Salman, M., Pek, E., Simongini, C., Bizri, Y., El-Korek, N., Lucca, E., 2021-02-26 Waste management in Lebanon is a significant issue anticipating cascading and spill over effect on livelihood environment and agriculture North Lebanon has been experiencing population growth spurts due to humanitarian crises in neighbouring countries that contributes to the urgency of finding sustainable solutions Adequate delivery of response measures is beyond the capacities of local authorities Consequently waste crisis has reached its historical peaks It is unlikely that upcoming years can bring radical shifts related to the trends in rapidly increasing waste generation However the seemingly uncontrollable mechanisms should not lead to inaction but concentrated efforts should be stepped up to eliminate harmful consequences The project Rehabilitation and waste management of El Bared Canal Irrigation System to reduce source to sea pollution and improve livelihoods in the Akkar Region of Lebanon financed by the Government of Norway has been formulated to ensure minimal discharges of waste from El Bared System to the Mediterranean Sea thus improving the livelihoods of the people depending on the system through irrigation canal system rehabilitation solid waste disposal and improved agricultural output and job creation Applying a pilot approach the project mainly focuses on Akkar irrigation scheme to introduce both hard investment and soft measures in response to the waste crisis Following a multi criteria assessment approach the current report maps waste removal technologies and provides recommendations on their functions and suitability in the context of the target area Based on broader understanding of the feasibility it helps come to a decision on technology selection **Catalog of Copyright Entries.
