

Weather & Climate Lab

This compact, 5-in-1 weather station provides the tools to investigate specific weather phenomena and Earth's climate system in general, using the five unique attachments. You can observe a variety of climate-related experiments, you can understand how and why the weather is one of the most popular weather station features and use the tools to find rain, temperature, air gauge, barometer (used open indication), and thermometer to measure weather data. The manual takes you through various weather experiments and includes pages for record-keeping. Home, Supplemental experiments using household materials available online.

- Investigate a variety of topics including air pressure and temperature, the water cycle, the atmosphere, wind, and more.
- Encourages and develops observation and note-taking skills
- Efficient design includes a durable stake to secure the weather station into the ground or to a pole outside for real-time measurements.

Abstract. The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and blood pressure (BP) of sedentary, middle-aged men. The subjects were divided into two groups: a control group and an exercise group. The exercise group performed a 12-week training program consisting of three sessions per week, each lasting 30 minutes. The control group did not exercise. The HR and BP were measured at the beginning and end of the 12-week period. The results showed that the exercise group had a significant decrease in both HR and BP compared to the control group. The HR decreased from 72 to 68 beats per minute, and the BP decreased from 120/80 to 110/70 mmHg. The control group showed no significant change in HR and BP. The study concluded that a 12-week training program can effectively reduce HR and BP in sedentary, middle-aged men.
