Solution Manager 7.1 SP 5 Troubleshooting guide for System monitoring, E2E Diagnostics, JSM Health check and performance issues

5 5 12,753

While implementing System monitoring for ABAP systems, E2E Diagnostics for Enterprise Portal and JSM health check for ABAP systems, we faced many unexpected issues. Some issues were only in Production environment and not in Quality/Development environment of SolMan. I have tried to document those issues and the solutions we used. Hope this will help the SolMan consultants who are facing these issues in their implementation. We were on SolMan 7.1 SP 5.

1 Functionality: System monitoring

1.1 Issue: Alerts not generated

1) The background job SAP_ALERT_CALCULATION_ENGINE (runs every minute)

This job is the main calculation job for all metrics, events and alerts. If this job is not running properly, no alerts will ever be generated.

If the engine job is not scheduled, you can execute the step in

Basic Configuration -> Step 5 Configure Automatically -> Create Alert Calculation Job.

Screen shots:

5 minutes after executing this step the first metrics should be green.

2) The DPC push web service and EFWK resource manager

Without this service, no metrics can be pushed from the managed system to the solution manager, resulting in grey metrics and no alerts.

Cognitively Diagnostic Assessment Paul D. Nichols, Susan F. Chipman, Robert L. Brennan, 2012-12-06 During the past two or three decades research in cognitive science and psychology has yielded an improved understanding of

the fundamental psychological nature of knowledge and cognitive skills that psychological testing attempts to measure. These theories have reached sufficient maturity making it reasonable to look upon them to provide a sound theoretical foundation for assessment particularly for the content of assessments. This fact combined with much discontentedness over current testing practices has inspired efforts to bring testing and cognitive theory together to create a new theoretical framework for psychological testing: a framework developed for diagnosing learners' differences rather than for ranking learners based on their differences. This volume presents some initial accomplishments in the effort to bring testing and cognitive theory together. Contributors originate from both of the relevant research communities: cognitive research and psychometric theory. Some represent collaborations between representatives of the two communities; others are efforts to reach out in the direction of the other community. Taking fundamentally different forms, psychometric test theory assumes that knowledge can be represented in terms of one or at most a few dimensions, whereas modern cognitive theory typically represents knowledge in networks, either networks of conceptual relationships or the transition networks of production systems. Cognitively diagnostic assessment is a new enterprise and it is evident that many challenging problems remain to be addressed. Still, it is already possible to develop highly productive interactions between assessment and instruction in both automated tutoring systems and more conventional classrooms. The editors hope that the chapters presented here show how the reform of assessment can take a rigorous path.

Distillation Diagnostics Henry Z. Kister, 2025-02-11. Thorough guide on how to use various diagnostic techniques to troubleshoot problems in distillation columns. Distillation Diagnostics familiarizes the reader with the multitude of tools available for diagnosing distillation and absorption tower problems and provides the reader with application guidelines derived from 40 years of real world experiences of the author. The book describes the capabilities, strengths, and limitations of each tool, provides guidance on how to apply these tools to get the most insight, and to test theories and ideas, shares the experience of how to correctly interpret the results provided by each technique, and guides the reader to a multitude of additional testing that they can perform to bring them closer to a correct diagnosis and an effective fix. Each technique is illustrated with real case studies and an extensive do's and don'ts list. Written by a global authority on distillation diagnostics and troubleshooting, known as The Tower Doctor by many in the field, Distillation Diagnostics includes information on possible solutions to the growing distillation failure rate despite the tremendous recent advances in distillation technologies. Time-tested tools and techniques for correctly diagnosing distillation problems to provide simple, low-cost fixes instead of unnecessary, wasteful solutions, thus eliminating waste and dramatically reducing CAPEX, energy consumption, and carbon footprint. Combining the various diagnostic techniques to discard wrong theories and narrow in on the correct root cause and proper solution for various tower malfunctions: Diagnosing flooding, foaming, plugging, weeping, maldistribution, channeling, distributor and collector overflows, low efficiencies, feeds and draws bottlenecks, assembly mishaps, tower internals damage, high base level issues, reactions in towers, contaminants, internal and external leaks, startup and or

shutdown difficulties Correctly interpreting gamma scan thermal scan and pressure drop data Getting the most out of testing techniques such as gamma scanning neutron backscatter wall temperature surveys pressure drop measurements column testing sketching points of transition collecting data for simulations conducting mass and energy balances analyzing operating charts and in situ water testing Turnaround tower inspections what to look for Advanced gamma scanning and thermal scanning techniques and when to apply The doctor and patient troubleshooting strategy which often constitutes the most effective most systematic and least expensive course of action Things to remember when formulating and testing theories such as the balance between theory data the laws of physics and chemistry Distillation Diagnostics is a timely essential reference on the subject for plant managers and operators production and startup supervisors and chemical process and design engineers
