Chapter 1: Usability of Interactive Systems Discussion Topics with Answers

1. Devise an outline, consistent with the scientific method, which interface researchers should follow to validate their designs.

Following the scientific method closely works very well in usability studies. Identify a "control", formulate a hypothesis, test for hypothesis being true or false, etc. is an ideal model for interface researchers.

2. List some characteristics of successful user interface designers with respect to their approach to solving UI problems

- Successful UI designers go beyond vague notions of "user friendliness", "intuitive", and "natural" doing more than simply making checklists of subjective guidelines.
- They have a thorough understanding of the diverse community of users and the tasks that must be accomplished.
- They study evidence-based guidelines and pursue the research literature when necessary.
- They are deeply committed to enhancing the user experience, which strengthens their resolve when they face difficult choices, time pressures, and tight budgets.
- Are aware of the importance of eliciting emotional responses, attracting attention with animations, and playfully surprising users

3. As noted in the book, some skeptics feel that accommodating diversity requires dumbing-down or lowest-common-denominator strategies. However, the authors claim that in their experience, rethinking interface designs to accommodate these diversity situations will result in a better product for all users. Give an example of a product that meets the specific needs of a certain group of people, yet gives all users a better experience.

One answer could be Automated Teller Machines (ATM) diverse neighborhoods, allowing the user to select the language continuing to interact with the machine. Chapter 6 goes into a Study on ATM design.
