Chapter 1

Problem 1.1

A nucleus, originally at rest, decays radioactively by emitting an electron of momentum $1.73 \text{ MeV}/c$, and at right angles to the direction of the electron a neutrino with momentum $1.00 \text{ MeV}/c$. (The MeV (million electron volt) is a unit of energy, used in modern physics, equal to $1.60 \times 10^{-6} \text{ erg}$. Correspondingly, MeV/c is a unit of linear momentum equal to $5.34 \times 10^{-17} \text{ gm-cm/sec.}$) In what direction does the nucleus recoil? What is its momentum in MeV/c ? If the mass of the residual nucleus is $3.90 \times 10^{-27} \text{ gm}$, what is its kinetic energy, in electron volts?

Place the nucleus at the origin, and suppose the electron is emitted in the positive y direction, and the neutrino in the positive x direction. Then the resultant of the electron and neutrino momenta has magnitude

$$|\mathbf{p}_{e+\nu}| = \sqrt{(1.73)^2 + 1^2} = 2 \text{ MeV}/c,$$

and its direction makes an angle

$$\theta = \tan^{-1} \frac{1.73}{1} = 60^\circ$$

with the x axis. The nucleus must acquire a momentum of equal magnitude and directed in the opposite direction. The kinetic energy of the nucleus is

$$T = \frac{p^2}{2m} = \frac{4 \text{ MeV}^2 c^{-2}}{2 \cdot 3.9 \cdot 10^{-27} \text{ gm}} \cdot \frac{1.78 \cdot 10^{-27} \text{ gm}}{1 \text{ MeV } c^{-2}} = 9.1 \text{ ev}$$

This is much smaller than the nucleus rest energy of several hundred GeV , so the non-relativistic approximation is justified.

Surface Waves in Geomechanics: Direct and Inverse Modelling for Soils and Rocks Carlo G. Lai, Krzysztof

Wilmanski, 2007-03-23 Theories of surface waves develop since the end of XIX century and many fundamental problems like existence phase and group velocities attenuation quality factor mode conversion etc have been in part successfully solved within the framework of such simple models as ideal fluids or linear elasticity However a sufficiently complete presentation of this subject particularly for solids is still missing in the literature The sole exception is the book of I A Viktorov which contains an extensive discussion of fundamental properties of surface waves in homogeneous and stratified linear elastic solids with particular emphasis on contributions of Russian scientists Unfortunately the book has never been translated to English and its Russian version is also hardly available Practical applications of surface waves develop intensively since a much shorter period of time than theories even though the motivation of discoverers of surface waves such as Lord Rayleigh stems from their appearance in geophysics and seismology Nowadays the growing interest in practical applications of surface waves stem from the following two main factors surface waves are ideal for developing relatively cheap and convenient methods of nondestructive testing of various systems spanning from nanomaterials e g

 M. A. Kaashoek, J. H. van Schuppen, A. C. M. Ran, 1990 This volume is the second of the three volume publication containing
 the proceedings of the 1989 International Symposium on the Mathematical Theory of Networks and Systems MTNS 89
 which was held in Amsterdam The Netherlands June 19-23 1989 The International Symposia MTNS focus attention on
 problems from system and control theory circuit theory and signal processing which in general require application of
 sophisticated mathematical tools such as from function and operator theory linear algebra and matrix theory differential and
 algebraic geometry The interaction between advanced mathematical methods and practical engineering problems of circuits
 systems and control which is typical for MTNS turns out to be most effective and is as these proceedings show a continuing
 source of exciting advances The second volume contains invited papers and a large selection of other symposium
 presentations in the vast area of robust and nonlinear control Modern developments in robust control and H infinity theory
 for finite as well as for infinite dimensional systems are presented A large part of the volume is devoted to nonlinear control
 Special attention is paid to problems in robotics Also the general theory of nonlinear and infinite dimensional systems is
 discussed A couple of papers deal with problems of stochastic control and filtering vi Preface The titles of the two other
 volumes are Realization and Modelling in System Theory volume 1 and Signal Processing Scattering and Operator Theory
 and Numerical Methods volume 3 **Fundamental Aspects of Heterogeneous Catalysis Studied by Particle Beams**
 H.H. Brongersma, R.A. van Santen, 2013-03-08 Present day heterogeneous catalysis is rapidly being transformed from a
 technical art into a science based technology A major contribution to this important change is the advance of surface
 spectroscopic techniques able to characterize the complex surfaces of the heterogeneous catalytic system The Advanced
 Study Institute on which the current proceedings is based has as its primary aim the bringing together of a variety of
 lecturers outstanding in those fields of experience to enable a broad coverage of different relevant approaches Not only
 catalyst characterization but also catalytic reactivity had to be covered in order to relate catalyst properties with catalyst
 performance Since modern catalysis relates catalytic performance to microscopic molecular catalyst features theoretical
 electronic aspects also had to be included The Advanced Study Institute had a unique feature in that it brought together
 physicists catalytic chemists and chemical engineers whom rarely directly interact From physics especially new experimental
 possibilities of beams were emphasized At present it is possible to obtain very detailed information on model catalysts whilst
 the applications to practical catalysts are gaining rapidly in sophistication Apart from the plenary lectures the Institute
 included hot topics to highlight special developments and offered participants the opportunity to present contributed papers
 either orally or as a poster These contributions formed an integral part of the summer school and significantly enhanced the
 interaction between participants Inclusion of the hot topics and contributed papers in these proceedings give them an added

Determination and Control Section National Aeronautics and Space Administration Goddard Space Flight Center Extensive work has been done for many years in the areas of attitude determination attitude prediction and attitude control During this time it has been difficult to obtain reference material that provided a comprehensive overview of attitude support activities This lack of reference material has made it difficult for those not intimately involved in attitude functions to become acquainted with the ideas and activities which are essential to understanding the various aspects of spacecraft attitude support As a result I felt the need for a document which could be used by a variety of persons to obtain an understanding of the work which has been done in support of spacecraft attitude objectives It is believed that this book prepared by the Computer Sciences Corporation under the able direction of Dr James Wertz provides this type of reference This book can serve as a reference for individuals involved in mission planning attitude determination and attitude dynamics an introductory textbook for students and professionals starting in this field an information source for experimenters or others involved in spacecraft related work who need information on spacecraft orientation and how it is determined but who have neither the time nor the resources to pursue the varied literature on this subject and a tool for encouraging those who could expand this discipline to do so because much remains to be done to satisfy future needs

A Modern Course in Aeroelasticity Howard C. Curtiss Jr., Robert H. Scanlan, Fernando Sisto, 2013-11-11 A reader who achieves a substantial command of the material contained in this book should be able to read with understanding most of the literature in the field Possible exceptions may be certain special aspects of the subject such as the aeroelasticity of plates and shells or the use of electronic feedback control to modify aeroelastic behavior The first author has considered the former topic in a separate volume The latter topic is also deserving of a separate volume In the first portion of the book the basic physical phenomena of divergence control surface effectiveness flutter and gust response of aeronautical vehicles are treated As an indication of the expanding scope of the field representative examples are also drawn from the non aeronautical literature To aid the student who is encountering these phenomena for the first time each is introduced in the context of a simple physical model and then reconsidered
