Advances in Machine Learning and Data Science Damodar Reddy Edla,Pawan Lingras,Venkatanareshbabu K.,2018-05-16 The Volume of Advances in Machine Learning and Data Science Recent Achievements and Research Directives constitutes the proceedings of First International Conference on Latest Advances in Machine Learning and Data Science LAMDA 2017 The 37 regular papers presented in this volume were carefully reviewed and selected from 123 submissions These days we find many computer programs that exhibit various useful learning methods and commercial applications Goal of machine learning is to develop computer programs that can learn from experience Machine learning involves knowledge from various disciplines like statistics information theory artificial intelligence computational complexity cognitive science and biology For problems like handwriting recognition algorithms that are based on machine learning out perform all other approaches Both machine learning and data science are interrelated Data science is an umbrella term to be used for techniques that clean data and extract useful information from data In field of data science machine learning algorithms are used frequently to identify valuable knowledge from commercial databases containing records of different industries financial transactions medical records etc The main objective of this book is to provide an overview on latest advancements in the field of machine learning and data science with solutions to problems in field of image video data and graph processing pattern recognition data structuring data clustering pattern mining association rule based approaches feature extraction techniques neural networks bio inspired learning and various machine learning algorithms *Recent Advances in Robot Learning* Judy A. Franklin,Tom M. Mitchell,Sebastian Thrun,2012-12-06 Recent Advances in Robot Learning contains seven papers on robot learning written by leading researchers in the field As the selection of papers illustrates the field of robot learning is both active and diverse A variety of machine learning methods ranging from inductive logic programming to reinforcement learning is being applied to many subproblems in robot perception and control often with objectives as diverse as parameter calibration and concept formulation While no unified robot learning framework has yet emerged to cover the variety of problems and approaches described in these papers and other publications a clear set of shared issues underlies many robot learning problems Machine learning when applied to robotics is situated it is embedded into a real world system that tightly integrates perception decision making and execution Since robot learning involves decision making there is an inherent active learning issue Robotic domains are usually complex yet the expense of using actual robotic hardware often prohibits the collection of large amounts of training data Most robotic systems are real time systems Decisions must be made within critical or practical time constraints These characteristics present challenges and constraints to the learning system Since these characteristics are shared by other important real world application domains robotics is a highly attractive area for research on machine learning On the other hand machine learning is also highly attractive to robotics There is a great variety of open problems in robotics that defy a static hand coded solution Recent Advances in Robot Learning is an edited

Online Collective Action Nitin Agarwal,Merlyna Lim,Rolf T. Wigand,2014-08-01 This work addresses the gap in the current collective action literature exposed by the new Information and Communication Technologies ICTs landscape by bringing together qualitative and quantitative studies from computational and social sciences The book offers a rigorous and systematic investigation of both methodological and theoretical underpinnings and thus collectively promotes a symbiotic and

synergistic advancement of the multiple interconnected disciplines in studying online collective actions More specifically the book is intended to illuminate several fundamental and powerful yet theoretically undeveloped and largely unexplored aspects of collective action in the participatory media e g social media Through in depth exploration of relevant concepts theories methodologies applications and case studies the reader will gain an advanced understanding of collective action with the advent of the new generation of ICTs enabled by social media and the Internet The developed theories will be valuable and comprehensive references for those interested in examining the role of ICTs not only in collective action but also in decision and policy making understanding the dynamics of interaction collaboration cooperation communication as well as information flow and propagation and social network research for years to come Further the book also serves as an extensive repository of data sets and tools that can be used by researchers leading to a deeper and more fundamental understanding of the dynamics of the crowd in online collective actions
