

Solubility and Temperature

Answer Key

Vocabulary: concentration, dissolve, homogeneous mixture, solubility, solubility curve, solute, solution, solvent

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

[Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.]

1. What happens when you stir a spoonful of sugar into hot water?

The sugar dissolves into the water.

2. When sugar or another substance is **dissolved** in water, it disappears from view and forms a **homogeneous mixture** with the water, also called a **solution**.

If you can't see the sugar, how can you tell that it is there?

The water tastes sweet and may appear slightly cloudy. [You can boil or evaporate the water to see solid sugar again.]

3. Does sugar dissolve more easily in hot water or cold water? *Hot water*

Gizmo Warm-up

A solution generally consists of two parts, a **solute** that is dissolved and a **solvent** that the solute is dissolved into. For example, sugar is a solute that is dissolved into the solvent water. In the *Solubility and Temperature* Gizmo™, you will study how temperature affects how much solute will dissolve in a solution.

To begin, check that **Potassium nitrate** is selected and the **Temp.** of the water is 20 °C. Click OK.

1. In this solution, what is the solute? *Potassium nitrate*

What is the solvent? *Water*

2. Click **Add 10 g** to mix 10 g of potassium nitrate into the water.

A. Did all of the potassium nitrate dissolve? *Yes*

B. How can you tell?

All of the potassium nitrate disappeared as it was stirred into the water.

The industries of the world, a course of technical education, ed. by J. Wylde James Wylde, 1881 *Exploring Chemistry (Loose-Leaf)* Matthew Johll, 2012-05-04 Matthew Johll's *Exploring Chemistry* covers the standard topics for the nonmajors course in the typical order but each chapter unfolds in the context of a single case study that helps students connect what they are learning to real life situations. For example, students work through the often difficult topics of molecular structure, gas laws, and organic chemistry by learning about the development of powerful new chemotherapy drugs, new technologies for screening airline passengers, and the creation of biodegradable biopolymers. It's the same case-driven approach that Johll uses in his acclaimed *Investigating Chemistry* now in its Third Edition, but *Exploring Chemistry* goes beyond the other book's specific focus on examples from forensic science to use real life stories from cooking, athletics, genetics, green chemistry, and more.

Properties of Matter for Grades 3-5 Jennifer E. Lawson, 2021-10-14 *Properties of Matter for Grades 3-5* from *Hands On Science for British Columbia: An Inquiry Approach* completely aligns with BC's New Curriculum for science. Grounded in the Know-Do-Understand model, First Peoples' knowledge and perspectives, and student-driven scientific inquiry, this custom-written resource emphasizes Core Competencies so students engage in deeper and lifelong learning, develops Curricular Competencies as students explore science through hands-on activities, fosters a deep understanding of the Big Ideas in science. Using proven Hands On features, *Properties of Matter for Grades 3-5* contains information and materials for both teachers and students, including Curricular Competencies correlation charts, background information on the science topics, complete easy-to-follow lesson plans, digital reproducible student materials, and materials lists. Innovative new elements have been developed specifically for the new curriculum: a multi-age approach, a five-part instructional process (Engage, Explore, Expand, Embed, Enhance), an emphasis on technology, sustainability, and personalized learning, a fully developed assessment plan for summative, formative, and student self-assessment, a focus on real life Applied Design Skills and Technologies, learning centres that focus on multiple intelligences, and universal design for learning (UDL). Place-based learning activities, Makerspaces, and Loose Parts. In *Properties of Matter for Grades 3-5*, students investigate matter. Core Competencies and Curricular Competencies will be addressed while students explore the following Big Ideas: Humans interact with matter every day through familiar materials; Materials can be changed through physical and chemical processes; Matter is useful because of its properties. Download the FREE digital resources, image banks, and reproducibles that accompany this book by following the instructions printed on the first page of the Appendix.

Science I Essential Interactions, 2000-10 *NanoMind: Exploring Synergies in Nanotechnology and Machine Learning* Shubham Mahajan, Susanta Das, Alvaro Rocha, Debanjali Barman Roy, Paras Chawla, 2025-06-04 *NanoMind* serves as a captivating exploration at the crossroads of nanotechnology and machine learning, revealing the profound synergies between these two groundbreaking fields. At its core, the book is a guided tour through the intricate realms of nanoscale materials and artificial

intelligence illuminating their combined potential to reshape the landscape of innovation The journey begins with an introductory chapter setting the stage for the convergence of nanotechnology and machine learning Readers are introduced to the fundamental principles and applications of nanoscale materials laying the groundwork for a deeper understanding of the nano world Simultaneously the basics of machine learning are demystified providing a comprehensive overview of the methodologies and concepts that underpin AI Nanoscale Sensing and Imaging takes readers into the realm of advanced technologies showcasing how machine learning enhances our ability to sense and image materials at the nanoscale The narrative then seamlessly transitions to the creation and optimization of materials with nano enhancements in Nano Enabled Materials This section demonstrates how the marriage of nanotechnology and machine learning can lead to the development of materials with unprecedented properties fostering innovation in diverse industries The exploration extends into the field of healthcare with Machine Learning in Nanomedicine unveiling how AI at the nanoscale is transforming diagnostics drug delivery and personalized medicine Quantum Computing and Nanotechnology delves into the cutting edge intersection of quantum computing nanotech and machine learning showcasing the potential for revolutionary advancements in computation and problem solving However the journey isn't without its challenges The book devotes a section to Challenges and Ethical Considerations addressing the complexities and ethical dimensions associated with the convergence of nanotechnology and machine learning This discussion ensures that readers are equipped to navigate the ethical landscape responsibly

Exploration and Meaning Making in the Learning of Science Bernard Zubrowski, 2009-08-14 Mountaineers Rock Climbers and Science Educators Around the 1920s rock climbing separated from mountaineering to become a separate sport At that time European climbers developed new equipment and techniques enabling them to ascend mountain faces and to climb rocks which were considered unassailable up to that time American climbers went further by expanding and improving on the equipment They even developed a system of quantification where points were given for the degree of difficulty of an ascent This system focused primarily on the pitch of the mountain and it even calculated up to decimals to give a high degree of quantification Rock climbing became a technical

system Csikszentmihalyi 1976 observed that the sole interest of rock climbers at that time was to climb the rock Rock climbers were known to reach the top and not even glance around at the scenery The focus was on reaching the top of the rock In contrast mountaineers saw the whole mountain as a single unit of perception The ascent to them is a gestalt including the aesthetic historical personal and physical sensations Csikszentmihalyi 1976 p 486 This is an example of two contrasting approaches to the same kind of landscape and of two different groups of people Interestingly in the US Europe and Japan a large segment of the early rock climbers were young mathematicians and theoretical physicists while the mountaineers were a more varied lot
