Fuchs, 2010-11-18 Based on courses for students of science engineering and systems science at the Zurich University of Applied Sciences at Winterthur this text approaches the fundamentals of thermodynamics from the point of view of continuum physics By describing physical processes in terms of the flow and balance of physical quantities the author achieves a unified approach to hydraulics electricity mechanics and thermodynamics In this way it becomes clear that entropy is the fundamental property that is transported in thermal processes i.e. heat and that temperature is the corresponding potential The resulting theory of the creation flow and balance of entropy provides the foundation of a dynamical theory of heat This extensively revised and updated second edition includes new material on dynamical chemical processes thermoelectricity and explicit dynamical modeling of thermal and chemical processes To make the book more useful for courses on thermodynamics and physical chemistry at different levels coverage of topics is divided into introductory and more advanced and formal treatments Previous knowledge of thermodynamics is not required but the reader should be familiar with basic electricity mechanics and chemistry and should have some knowledge of elementary calculus The special feature of the first edition the integration of thermodynamics heat transfer and chemical processes has been maintained and strengthened Key Features First revised edition of a successful text reference in fourteen years More than 25 percent new material Provides a unified approach to thermodynamics and heat transport in fundamental physical and chemical processes Includes worked examples questions and problem sets for use as a teaching text or to test the reader
