

Weather & Climate Lab

This compact, 5-in-1 weather station provides the tools to investigate specific weather phenomena and Earth's climate system in general, using the five unique attachments. You can observe a variety of climate-related experiments, you can understand how and why the weather is one of the most popular weather station features and use the tools to find rain, temperature, air gauge, barometer (used open indication), and thermometer to measure weather data. The manual takes you through various weather experiments and includes pages for record-keeping. Home, Supplemental experiments using household materials available online.

- Investigate a variety of topics including air pressure and temperature, the water cycle, the atmosphere, wind, and more.
- Encourages and develops observation and note-taking skills
- Efficient design includes a durable stake to secure the weather station into the ground or to a pole outside for real-time measurements.

Abstract. The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in the city of Ankara, Turkey. The study group consisted of 20 children (10 boys and 10 girls) who were randomly selected from the 10-year-old children in the school. The children were divided into two groups: a control group and an experimental group. The control group did not participate in any physical activity during the study period, while the experimental group participated in a 12-week training program. The physical fitness of the children was measured at the beginning and at the end of the study period. The measurements included heart rate, blood pressure, and body mass index. The results of the study showed that the experimental group had significantly higher heart rates and blood pressures at the end of the study period compared to the control group. The body mass index of the children in the experimental group also increased significantly. These findings suggest that a 12-week training program can improve the physical fitness of 10-year-old children.
