This volume, which belongs to a three-volume set, provides engineering researchers and professionals with a timely overview and extensive information on trends and technologies behind the future developments of mechatronics systems in the era of Industry 4.0.

**Integration of Process Design and Control** E. Zafiriou, 2014-05-23. The existence of interactions between the design of a process and that of its control system have been known to industrial practitioners for a long time. In the past decade, academic research has produced methodologies and tools that begin to address the issue of designing processes that are flexible, can be controlled reliably and are inherently safe. This publication unites the work of academics and practitioners with interests in the integration of process design and control in order to examine the state of the art in methodologies and applications. The scope covers the design of chemical plants at different stages of detail. It also examines control issues from the plantwide

level where for example recycles between units can be important to the specific unit level where the availability or selection of measurements might be the most important factor
