Algorithms Kenneth A. Berman, Jerome L. Paul, 2005. Algorithms Sequential, Parallel, and Distributed offers in depth coverage of traditional and current topics in sequential algorithms, as well as a solid introduction to the theory of parallel and distributed algorithms. In light of the emergence of modern computing environments such as parallel computers, the Internet, and cluster and grid computing, it is important that computer science students be exposed to algorithms that exploit these technologies. Berman and Paul's text will teach students how to create new algorithms or modify existing algorithms, thereby enhancing students' ability to think independently.

A Branch-and-bound Algorithm for Representative Integer Efficient Solutions in

Multiple Objective Network Programming Problems Minghe Sun, 2009 In many applications of multiple objective network programming problems only integer solutions are acceptable as the final optimal solution Representative efficient solutions are usually obtained by sampling the efficient set through the solution of augmented weighted Tchebycheff network programs Because such efficient solutions are usually not integer solutions a branch and bound algorithm is developed to find integer efficient solutions The purpose of the branch and bound algorithm is to support interactive procedures by generating representative integer efficient solutions To be computationally efficient the algorithm takes advantage of the network structure as much as possible An algorithm used in the branch and bound algorithm and performed on the spanning tree is developed to construct feasible solutions from infeasible solutions and basic solutions from nonbasic solutions when bounds on branching variables change The branch and bound algorithm finds either supported or unsupported integer efficient solutions as long as they are optimal Details of the algorithm are presented an example is provided and computational results are reported Computational results show that the algorithm is very powerful
