Waves Sanichiro Yoshida, 2018-01-12 Waves are everywhere in our daily life We all experience sound and light with our ears and eyes we use microwaves to cook and radio waves are transmitted from and are received by our cell phones These are just some examples of waves that carry energy from point A to B However we may not know details of the physics underlying all these waves It is important to understand the mechanisms that generate wave dynamics for a given system It is not straightforward to explain how an electromagnetic field becomes oscillatory and propagates as a wave Waves sometimes represent the underlying dynamics of observed phenomena at a fundamental level of physics This book is designed to explore these mechanisms by discussing various aspects of wave dynamics from as many perspectives as possible The target audiences are undergraduate students majoring in engineering science and graduate students majoring in general engineering Going beyond the typical approach to learning science this book discusses wave dynamics and related concepts at various levels of mathematics and physics sometimes touching on profound physics behind them This book was written to help readers learn wave dynamics on a deep physical level and develop innovative ideas in their own fields

*Predicting the T2K Neutrino Flux and Measuring Oscillation Parameters* Tomislav Vladislavjevic, 2020-09-14 This thesis reports the calculation of neutrino production for the T2K experiment the most precise a priori estimate of neutrino production that has been achieved for any accelerator based neutrino oscillation experiment to date The production of intense neutrino beams at accelerator facilities requires exceptional understanding of chains of particle interactions initiated within extended targets In this thesis the calculation of neutrino production for T2K has been

improved by using measurements of particle production from a T2K replica target taken by the NA61 SHINE experiment This enabled the reduction of the neutrino production uncertainty to the level of 5% which will have a significant impact on neutrino oscillation and interaction measurements by T2K in the coming years In addition to presenting the revised flux calculation methodology in an accessible format this thesis also reports a joint T2K measurement of muon neutrino and antineutrino disappearance and the accompanying electron neutrino and antineutrino appearance with the updated beam constraint
