Endurance Scott Kelly,2017-10-17 NATIONAL BEST SELLER A stunning personal memoir from the astronaut and modern day hero who spent a record breaking year aboard the International Space Station a message of hope for the future that will inspire for generations to come The veteran of four spaceflights and the American record holder for consecutive days spent in space Scott Kelly has experienced things very few have Now he takes us inside a sphere utterly hostile to human life He describes navigating the extreme challenge of long term spaceflight both life threatening and mundane the devastating effects on the body the isolation from everyone he loves and the comforts of Earth the catastrophic risks of

colliding with space junk and the still more haunting threat of being unable to help should tragedy strike at home an agonizing situation Kelly faced when on a previous mission his twin brother's wife American Congresswoman Gabrielle Giffords was shot while he still had two months in space Kelly's humanity compassion humor and determination resonate throughout as he recalls his rough and tumble New Jersey childhood and the youthful inspiration that sparked his astounding career and as he makes clear his belief that Mars will be the next ultimately challenging step in spaceflight In *Endurance* we see the triumph of the human imagination the strength of the human will and the infinite wonder of the galaxy On Visualization Erna Fiorentini, 2021-12 As an invitation to explore the all encompassing term textit visualization from a new vantage point this book suggests a topological approach to identify individual domains in the global stream of visualization practices and intentions Here particular and often hidden partly non visual or non visible forms emerge as individual distinct modes of visualizing that go beyond infographics as the idea informing most of the today understanding of visualization These modes offer frames in which to put the phenomenon of visualization with a view to notions more appropriate to the plurality of its manifestations *Ethnographic Film* Karl G. Heider, 2009-04-20 From reviews of the first edition Ethnographic Film can rightly be considered a film primer for anthropologists Choice This is an interesting and useful book about what it means to be ethnographic and how this might affect ethnographic filmmaking for the better It obviously belongs in all departments of anthropology and most ethnographic filmmakers will want to read it Ethnohistory Even before Robert Flaherty released *Nanook of the North* in 1922 anthropologists were producing films about the lifeways of native peoples for a public audience as well as for research and teaching Ethnographic Film 1976 was one of the first books to provide a comprehensive introduction to this field of visual anthropology and it quickly became the standard reference In this new edition Karl G Heider thoroughly updates Ethnographic Film to reflect developments in the field over the three decades since its publication focusing on the work of four seminal filmmakers Jean Rouch John Marshall Robert Gardner and Timothy Asch He begins with an introduction to ethnographic film and a history of the medium He then considers many attributes of ethnographic film including the crucial need to present whole acts whole bodies whole interactions and whole people to preserve the integrity of the cultural context Heider also discusses numerous aspects of making ethnographic films from ethics and finances to technical considerations such as film versus video and preserving the filmed record He concludes with a look at using ethnographic film in teaching *Successful Inclusion Strategies for Secondary and Middle School Teachers* M. digits using MNIST dataset The MNIST dataset is a widely used dataset in machine learning and computer vision particularly for image classification tasks It consists of a collection of handwritten digits from zero to nine where each digit is represented as a 28x28 grayscale image The dataset was created by collecting handwriting samples from various individuals and then preprocessing them to standardize the format Each image in the dataset represents a single digit and is labeled with the corresponding digit it represents The labels range from 0 to 9 indicating the true value of the handwritten digit In Chapter 3 you will learn how to perform recognizing traffic signs using GTSRB dataset from Kaggle There are several different types of traffic signs like speed limits no entry traffic signals turn left or right children crossing no passing of heavy vehicles etc Traffic signs classification is the process of identifying which class a traffic sign belongs to In this Python project you will build a deep neural network model that can classify traffic signs in image into different categories With this model you will be able to read and understand traffic signs which are a very important task for all autonomous vehicles You will build a GUI application for this purpose In Chapter 4 you will learn how to perform detecting brain tumor using Brain Image MRI dataset Following are the steps taken in this chapter Dataset Exploration Explore the Brain Image MRI dataset from Kaggle Describe the structure of the dataset the different classes tumor vs non tumor and any preprocessing steps required Data Preprocessing Preprocess the dataset to prepare it for model training This may include tasks such as resizing images normalizing pixel values splitting data into training and testing sets and creating labels Model Building Use TensorFlow and Keras to build a deep learning model for brain tumor detection Choose an appropriate architecture such as a convolutional neural network CNN and configure the model layers Model Training Train the brain tumor detection model using the preprocessed dataset Specify the loss function optimizer and evaluation metrics Monitor the training process and visualize the training validation accuracy and loss over epochs Model Evaluation Evaluate the trained model on the testing dataset Calculate metrics such as accuracy precision recall and F1 score to assess the model s performance Prediction and Visualization Use the trained model to make predictions on new MRI images Visualize the predicted results alongside the ground truth labels to demonstrate the effectiveness of the model Finally you will build a GUI application for this purpose In Chapter 5 you will learn how to perform classifying gender using dataset provided by Kaggle using MobileNetV2 and CNN models Following are the steps taken in this chapter Data Exploration Load the dataset using Pandas perform exploratory data analysis EDA to gain insights into the data and visualize the distribution of gender classes Data Preprocessing Preprocess the dataset by performing necessary transformations such as resizing images converting labels to numerical format and splitting the data into training validation and test sets Model Building Use TensorFlow and Keras to build a gender classification model Define the architecture of the model compile it with appropriate loss and optimization functions and summarize the model s structure Model Training Train the model on the training set monitor its performance on the validation set and tune hyperparameters if necessary Visualize the training history to analyze the model s learning progress

Model Evaluation Evaluate the trained model's performance on the test set using various metrics such as accuracy, precision, recall, and F1 score. **Generate a classification report and a confusion matrix** to assess the model's performance in detail. **Prediction and Visualization** Use the trained model to make gender predictions on new unseen data. Visualize a few sample predictions along with the corresponding images. Finally, you will build a GUI application for this purpose. In Chapter 6, you will learn how to perform recognizing facial expression using FER2013 dataset using CNN model. The FER2013 dataset contains facial images categorized into seven different emotions: anger, disgust, fear, happiness, sadness, surprise, and neutral. To perform facial expression recognition using this dataset, you would typically follow these steps: **Data Preprocessing** Load and preprocess the dataset. This may involve resizing the images, converting them to grayscale, and normalizing the pixel values. **Data Split** Split the dataset into training, validation, and testing sets. The training set is used to train the model, the validation set is used to tune hyperparameters and evaluate the model's performance during training, and the testing set is used to assess the final model's accuracy. **Model Building** Build a deep learning model using TensorFlow and Keras. This typically involves defining the architecture of the model, selecting appropriate layers such as convolutional layers, pooling layers, and fully connected layers, and specifying the activation functions and loss functions. **Model Training** Train the model using the training set. This involves feeding the training images through the model, calculating the loss, and updating the model's parameters using optimization techniques like backpropagation and gradient descent. **Model Evaluation** Evaluate the trained model's performance using the validation set. This can include calculating metrics such as accuracy, precision, recall, and F1 score to assess how well the model is performing. **Model Testing** Assess the model's accuracy and performance on the testing set, which contains unseen data. This step helps determine how well the model generalizes to new unseen facial expressions. **Prediction** Use the trained model to make predictions on new images or live video streams. This involves detecting faces in the images using OpenCV, extracting facial features, and feeding the processed images into the model for prediction. Then, you will also build a GUI application for this purpose.
