Management and Visualisation Gordon Fletcher, 2022-12-27 As organisations of all sizes become increasingly digitalised a core management challenge remains unresolved The ability to successfully and sustainably connect the stated vision of an organisation with its strategic plans and in turn with the reported reality of day to day operations is largely an elusive ambition despite the many stated advantages provided by contemporary technologies In this book the case is made for visual management as a method of communications planning learning and reporting that connects the organisation in a single meaningful and seamless way Throughout this book visual management is theorised around the position that all forms of management documentation are an artefact of human construction and of the organisation itself that reflect learned patterns of activity The book places visual management as a more intuitive and seamless method of coordinating learning and communicating across an organisation than more traditional formats of presenting management documents Consciously assembling the artefacts of an organisation in order to manage it introduces a layer of criticality that encourages reflection and consistency that is often absent from current management practice The benefits that a visual approach brings to organisational management are an increasing necessity as machine learning robotics and process automation remove traditional roles from organisations and necessitate new views on how individuals now fit into a data informed business The book contributes to the academic debate regarding resource based and knowledge based views of the organisation by advocating a different more holistic viewpoint and will thus appeal to academics and researchers in this area It would also benefit students across business disciplines whilst the practical models and tools offered will benefit directors and managers looking to implement their own visual

Diversity of relevant subjects covered **Measuring Gender Equality** Enrico di Bella, Sandra Fachelli, Pedro
López-Roldán, Christian Suter, 2023-12-30 In this open access book the editors explicitly address the issue of measuring
gender equality The book introduces readers to basic concepts of gender equality equity and equal opportunities then
discusses measuring these phenomena the methods of constructing indicators and reviews the main indicators that have
been proposed at the international level to measure gender equality It then sets the theoretical discussions against the
findings from a Jean Monnet project financed by the European Union to highlight the importance of a regional analysis of
gender equality in four main study areas Italy Spain France and Germany The results make it clear that it is necessary to
move from the purely national perspective hitherto used in gender equality analyses to a regional one because differences
can be highly pronounced even within the same country This is a self contained volume requiring limited statistical expertise
for the reader and is aimed at social researchers and policymakers who wish to address gender equality from a quantitative
perspective
