

# WORK ORDER MANAGEMENT PROCESS

## WORK REQUEST APPROVAL

An administrator reviews incoming work requests and determines there is a need for maintenance assistance. The work request is approved.

## WORK ORDER CREATION

A work order is created from an approved work request, on-the-fly by the maintenance team, or automatically from a CMMS.

## PRIORITIZATION

The work order is assigned a priority based on the urgency of the work or intensity of the asset.

## SCHEDULING

The work order is scheduled based on its priority and the availability of the necessary parts, tools, labor resources, and access to the asset.

## DISTRIBUTION

The work order is given to the labor resource responsible for performing the work.

## ASSIGNMENT

The work order is assigned to a technician or service provider based on their skill level, availability, and the complexity of the work.

## EXECUTION

The labor resource performs the tasks listed on the work order.

## DOCUMENTATION

The labor resource records exactly what tasks were performed, how much time was spent, what parts were used and how many, and other relevant information.

## CLOSURE

The work order is closed when the work is complete and all required information has been documented. Additional "open" work orders can now be addressed.

## ANALYSIS

Administrators analyze historical work orders to track key performance indicators (KPIs) and continuously improve the work order management process.
