West Burnham, Malcolm Groves, 2022-07-19 It is not the role of schools to solve the climate crisis or any of the other multiple crises now facing humankind But it is powerfully their role if they so choose to equip young people as well as possible to deal with the consequences of the serious problems they will be inheriting from their elders not betterers Could it be our collective failure to respond effectively to the threat of the climate emergency or the challenges of the pandemic has been shaped to a small but significant degree by the nature of the learning that happens in our schools and a failure to enable young people to learn appropriately there That question lies at the heart of this thought provoking new book as it unpicks the concept of deep learning for future sustainability This combines deep understanding with action and links both to moral purpose It is not enough just to be concerned about climate change awareness must lead to action The book draws on an eclectic range of sources case studies of actual practice critical perspectives and opportunities for reflection The authors argue that first and foremost it is for educators and leaders to get on as best they can in their own school context to do what is both necessary and right to secure learning fit for a just and sustainable future irrespective of governmental lead in these matters In doing so the authors set out some clear evidence informed principles for school development and leadership that are central to the success of that mission [Cornell University Resource Guide for Agricultural Education](#) Cornell Educational Resources Program, 1998 **Index to Media and Materials for the Mentally Retarded, Specific Learning Disabled, Emotionally Disturbed** National Information Center for Special Education Materials, 1978 **World History: Connections to Today** Elisabeth Gaynor Ellis, Pearson/Prentice Hall, 2003-12 [LA Record](#) , 1999 **The Software Encyclopedia** , 1988
