

1 Wooldridge, Chapter 4, Exercise 2 (20 pts)

Consider an equation to explain salaries of CEOs in terms of annual firm sales, return on equity (*roe*, in percentage points), and return on the firm's stock (*ros* in percentage points):

$$\log(\text{salary}) = \beta_0 + \beta_1 \log(\text{sales}) + \beta_2 \text{roe} + \beta_3 \text{ros} + U. \quad (1)$$

1. In terms of model parameters ($\sim$ the β -coefficients) state the null hypothesis that, after controlling for *sales* and *roe*, *ros* has no effect on CEO salary. State the alternative that better stock market performance *increases* (!) CEO salary.
2. Using CEOSAL1, the following equation was obtained by OLS:

$$\widehat{\log(\text{salary})} = \underset{(0.32)}{4.32} + \underset{(0.035)}{0.280 \log(\text{sales})} + \underset{(0.0041)}{0.0174 \text{roe}} + \underset{(0.00054)}{0.00024 \text{ros}}$$

You can see the corresponding (heteroskedasticity-robust/White) standard errors in parentheses below the coefficients. In addition, you know from the output that $n = 209$ and $R^2 = 0.283$. By =what percentage is *salary* predicted to increase if *ros* increases by 50 percentage points? Does *ros* have a practically large effect on *salary*? (To phrase the question differently: Is the effect economically significant?)

3. Test the null hypothesis that *ros* has no effect on salary against the alternative that *ros* has a positive effect. Carry out the test on the 10% significance level. (Help to get the critical value: $\Phi^{-1}(0.9) = 1.282$, $\Phi^{-1}(0.8) = 0.842$, $\Phi^{-1}(0.95) = 1.645$.)
4. Would you include *ros* in a final model explaining CEO compensation in terms of firm performance? Explain.

Reviving Arab Reform Islam Abdelbary, 2021-02-15 Reviving Arab Reform seeks to understand the key factors that have inhibited a reliable reform programme in the Middle East following the 2010s Arab Spring riots and unrest. It also provides suggestions for policymakers on how to design, execute and assess an effective reform program suitable for Arab circumstances.

The Book of Why Judea Pearl, Dana Mackenzie, 2018-05-15 A Turing Award winning computer scientist and statistician shows how understanding causality has revolutionized science and will revolutionize artificial intelligence. Correlation is not causation. This mantra chanted by scientists for more than a century has led to a virtual prohibition on causal talk. Today that taboo is dead. The causal revolution instigated by Judea Pearl and his colleagues has cut through a century of confusion and established causality: the study of cause and effect on a firm scientific basis. His work explains how we can know easy things like whether it was rain or a sprinkler that made a sidewalk wet and how to answer hard questions like whether a drug cured an illness. Pearl's work enables us to know not just whether one thing causes another; it lets us explore the world that is and the worlds that could have been. It shows us the essence of human thought and key to artificial intelligence. Anyone who wants to understand either needs *The Book of Why*.

The Oxford Handbook of Panel Data Badi Hani Baltagi, 2015 The Oxford Handbook of Panel Data examines new developments in the theory and applications of panel data. It includes basic topics like non-stationary panels, cointegration in panels, multifactor panel models, panel unit roots, measurement error in panels, incidental parameters and dynamic panels, spatial panels, nonparametric panel data, random coefficients, treatment effects, sample selection, count panel data, limited dependent variable panel models, unbalanced panel models with interactive effects and influential observations in panel data. Contributors to the Handbook explore applications of panel data to a wide range of topics in economics including health, labor, marketing, trade, productivity and macro applications in panels. This Handbook is an informative and comprehensive guide for both those who are relatively new to the field and for those wishing to extend their knowledge to the frontier. It is a trusted and definitive source on panel data, having been edited by Professor Badi Baltagi, widely recognized as one of the foremost econometricians in the area of panel data econometrics. Professor Baltagi has successfully recruited an all-star cast of experts for each of the well-chosen topics in the Handbook.

Indigenous Technology Knowledge Systems Mishack T. Gumbo, P. John Williams, 2023-07-21 There has been a growing interest in indigenous knowledge systems and research This interest has been mainly triggered by the need to decolonize education as a response to the colonial onslaught on indigenous knowledge and people Research has however concentrated on the generality of the indigenous knowledge system rather than on its related dimensions One area that has suffered a lack of attention is indigenous conceptions of science technology engineering and mathematics STEM despite the unquestionable evidence of STEM in indigenous contexts Most STEM is presented by colonial establishments and representations especially in developed modern urban contexts which portray STEM as a colonial construct This book focuses on indigenous technological knowledge systems education ITKSE Indigenous people have been at the front of technological developments from pre colonial times The list of precolonial industries science and technology is extensive including blacksmithing wood carving textile weaving and dyeing leather works beadworks pottery making architecture agricultural breeding metal working salt production gold smithing copper smithing leather crafting soap making bronze casting canoe building brewing glass making and agriculture for example In some parts of the world such as Africa and Australia these technologies still exist ITKSE should not be left to exist outside of the technology education curriculum and classroom as it can benefit both indigenous students who have been denied learning about what is relevant to them and non indigenous students These cultural groups can expand their knowledge of technology by learning both ITKSE and Western technological knowledge systems education WTKSE ITKSE also presents opportunities for technology teachers to reflect on and revisit their depth of technological knowledge pedagogies and assessment The intent of this book is transformational in the sense that it brings decolonial and indigenous perspectives into the technology education context It extends technology education in the sense that it will not only influence Western minded architects artisans designers etc but encourage indigenous mindedness as well

Rural Labor Migration, Discrimination, and the New Dual Labor Market in China Guifu Chen, Shigeyuki Hamori, 2013-11-29 This book studies some important issues in China's labor market such as rural labor migration employment and wage discrimination the new dual labor market and economic returns on schooling using the newer and representative data and advanced estimation models This approach has yielded many interesting results including a solution to the dilemma of two ongoing crises since 2004 the rural labor surplus and severe shortage of migrant labor While male workers generally received less favorable treatment and consequently enjoyed a lower average employment probability than female workers in 1996 they also received preferential treatment over female workers who otherwise had identical worker characteristics in 2005 We provide new estimates for male female hourly wage differentials in urban China and our

results indicate that the hourly wage differentials and the unexplained part of the hourly wage differentials are smaller than the differentials obtained by ignoring the sample selection bias We study China s new dual labor market which is shifting from a rural migration versus urban workers setup to informal workers versus formal workers setup and present some interesting results Our study is the first to adopt the IV methodology and the Heckman 1979 two step procedure simultaneously for the estimation of economic returns on schooling in China

Johan van Benthem on Logic and Information Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27 This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem's work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations
