This book provides advanced theoretical and applied tools for the implementation of modern micro econometric techniques in evidence-based program evaluation for the social sciences. The author presents a comprehensive toolbox for designing rigorous and effective ex post program evaluation using the statistical software package Stata. For each method, a statistical presentation is developed, followed by a practical estimation of the treatment effects. By using both real and simulated data, readers will become familiar with evaluation techniques such as regression adjustment, matching, difference-in-differences, instrumental variables, regression discontinuity design, and synthetic control method, and are given practical guidelines for selecting and applying suitable methods for specific policy contexts. The second revised and extended edition features two new chapters on some recent development of difference-in-differences. Specifically, chapter 5 introduces advanced difference-in-differences methods when many times are available and treatment can be either time-varying or fixed at a specific time. Chapter 6 introduces the synthetic control method, a treatment effect estimation approach suitable when only one unit is

treated Both chapters present applications using the software Stata      *Climate Variability and Change in the Rift Valley and Blue Nile Basin, Ethiopia* Abate Mekuriaw Bizuneh, 2013 This study deals with three interrelated problems First it pursues the quest for local knowledge to understand climate variability and change at local levels Due to controversies uncertainties skepticism and embedded economic and political interests in the climate change discourse effective world collective action is more likely to delay for quite some time to come Moreover as climate change discourse remains very weak at engaging local knowledge policies that emanate from the discourse might be less responsive to local climate problems both in terms of policy ingredients and time frame So having highlighting the paramount importance of local knowledge this study documents and critically analyzes this knowledge system among subsistence farmers in Ethiopia Secondly it analyzes the economic impacts of climate variability and change and adaptation through quantitative methods with a special focus on crop production Finally it analyzes the factors that influence adaptive behavior In so doing it challenges the traditional approach of adaptation research and brings in a conceptual framework borrowed from psychosocial theory and empirically tests the approach in explaining adaptive behavior of farmers      **Panel Data Econometrics** Mike Tsionas, 2019-06-19 Panel Data Econometrics Theory introduces econometric modelling Written by experts from diverse disciplines the volume uses longitudinal datasets to illuminate applications for a variety of fields such as banking financial markets tourism and transportation auctions and experimental economics Contributors emphasize techniques and applications and they accompany their explanations with case studies empirical exercises and supplementary code in R They also address panel data analysis in the context of productivity and efficiency analysis where some of the most interesting applications and advancements have recently been made Provides a vast array of empirical applications useful to practitioners from different application environments Accompanied by extensive case studies and empirical exercises Includes empirical chapters accompanied by supplementary code in R helping researchers replicate findings Represents an accessible resource for diverse industries including health transportation tourism economic growth and banking where researchers are not always econometrics experts      **PROJECT ANALYSIS AND EVALUATION** Ayodeji Faloye, 2024-12-09 Master the Art of Project Success with Project Analysis and Evaluation Concepts Methods and Applications In a world where successful project execution defines the difference between growth and stagnation understanding how to effectively analyze and evaluate projects is critical Whether you are managing a multi million dollar infrastructure project assessing the feasibility of a social initiative or studying for a career in project management this book is designed to equip you with the knowledge and tools to make informed decisions and drive positive outcomes Project Analysis and Evaluation Concepts Methods and Applications is a comprehensive guide that bridges theory and practice giving readers a holistic approach to project evaluation Written by seasoned economist Faloye Ayodeji who has over 20 years of experience in development economics and econometrics this book provides detailed coverage of every aspect of project analysis from initial cost estimation to long term impact
