From Education to Work Walter R. Heinz, 1999-02-13 Structural transformations in the international economy and the restructuring of work have made the transition from education to employment increasingly problematic School to work pathways have become more socially segmented and the risk of under employment and joblessness has increased for both vocationally and academically educated youth Continuous passages have become less common and have given way to multiple entries and exits between schooling and working under employment unemployment and domestic work This edited volume of empirical studies is based on a series of comparable longitudinal research projects which draw on survey and biographical data from important players in the international economy the USA Great Britain Canada and Germany The studies document that social and gender inequality is a persistent structural feature that restricts the possibilities to take advantage of educational opportunities and career options Furthermore different institutional arrangements are shown to play a crucial role in distributing transition opportunities in a more equal way

emerged over whether the changes it has precipitated are generally positive or negative in nature or whether we should be contemplating our future association with the computer more with enthusiasm or trepidation Specifically with regard to the relationship between women and computers a diverse body of commentary has embraced the views of those who have found grounds for expressing pessimism about this association and those who have favoured a more optimistic assessment of the current situation and its probable future development This book undertakes a thorough evaluation of the legitimacy and predictive power of the optimistic commentary Using a large body of original qualitative data it interrogates the bases of what it identifies as three waves of optimism and in doing so provides answers to some of the key questions asked in this field today
